The various sharing initiatives seen in the Nordic countries over the last years within transportation, housing/accommodation, sharing/renting of smaller capital goods and personal services could yield considerable benefits for consumers due to better quality and/or lower prices of the services. They also have a potential for emissions reductions of CO2 and local pollutants. However, savings from lower prices could lead to increased emissions from increased demand of the services (particularly transport) and increased spending on other goods and services. Depending on how consumers spend their savings, these changes could partly, wholly or more than offset the initial emission reductions. The impacts on overall CO2 emissions depend on whether the emissions are taxed, part of the emissions trading system EU ETS or not regulated at all.

While the elevated Chicago Loop is justly famous as a symbol of the city, the fascinating history of its subways is less well known. The City of Chicago broke ground on what would become the "Initial System of Subways" during the Great Depression and finished 20 years later. This gigantic construction project, a part of the New Deal, would overcome many obstacles while tunneling through Chicago's soft blue clay, under congested downtown streets, and even beneath the mighty Chicago River. Chicago's first rapid transit subway opened in 1943 after decades of wrangling over routes, financing, and logistics. It grew to encompass the State Street, Dearborn-Milwaukee, and West Side Subways, with the latter modernizing the old Garfield Park "L" into the median of Chicago's first expressway. Take a trip underground and see how Chicago's "I Will" spirit overcame challenges and persevered to help with the successful building of the subways that move millions. Building Chicago's subways was national news and a matter of considerable civic pride--making it a "Second City" no more

"In 2001, Kenneth Deffeyes made a grim prediction: oil production would reach a peak within the next decade - and there was nothing anyone could do to stop it." "In this updated edition of *Hubbert's Peak*, Deffeyes explains the crisis that few now deny we are headed toward. Using geology and economics, he shows how everything from the rising price of groceries to the subprime mortgage crisis has been exacerbated by the shrinking supply - and growing price - of oil. Although there is no easy solution to these problems, Deffeyes argues that the first step is understanding the trouble that we are in."--BOOK JACKET.

Lithium batteries may hold the key to an environmentally sustainable, oil-independent future. From electric cars to a "smart" power grid that can actually store electricity, letting us harness the powers of the sun and the wind and use them when we need them, lithium—a metal half as dense as water, found primarily in some of the most uninhabitable places on earth—has the potential to set us on a path toward a low-carbon energy economy. In *Bottled Lightning*, the science reporter Seth Fletcher takes us on a fascinating journey, from the salt flats of Bolivia to the labs of MIT and Stanford, from the turmoil at GM to cutting-edge lithium-ion battery start-ups, introducing us to the key players and ideas in an industry with the power to reshape the world. Lithium is the thread that ties together many key stories of our time: the environmental movement; the American auto industry, staking its revival on the electrification of cars and trucks; the struggle between first-world countries in need of natural resources and the impoverished countries where those resources are found; and the overwhelming popularity of the portable, Internet-connected gadgets that are changing the way we communicate. With nearly limitless possibilities, the promise of lithium offers new hope to a foundering American economy desperately searching for a green-tech boom to revive it.

The 300 SL (W 194) is the first racing car with which Mercedes-Benz renewed its participation in international automobile racing in the postwar period. Top-ranking positions and triumphs, such as at the legendary twenty-four-hour endurance race in Le Mans or the Carrera Panamericana in Mexico, are not a long time in the coming and as early as 1952 secure a place for the Stuttgart-based make in the worldwide motor sports scene. The racing car achieved particular fame for its unusual gull-winged doors, which turn the production sports car 300 SL, introduced in 1954 and directly derived from the W 194, into one of the lasting icons in automobile history. The book provides exhaustive and authentic documentation of the technical development of the W 194 based on extensive research in the archives of Mercedes-Benz Classic: all of the races as well as the biography of each individual vehicle are presented with the aid of in part unpublished images and illustrations. Its high-quality design as well as its exquisite features make the book a true collector's item. (German edition ISBN 978-3-7757-4002-9)

Carotenoid Chemistry and Biochemistry covers the proceedings of the Sixth International Symposium on Carotenoids, held in Liverpool, United Kingdom on July 26-31, 1981. This symposium highlights the interest in biochemical and biological aspects of carotenes. This book is organized into 25 chapters including chapters on carotenoid chemistry, their structures, synthesis and physical methods, with emphasis on their stereochemistry. Other chapters deal with the chemistry of complexes between carotenoids or retinoids and protein, the novel blue carotenoproteins, and the visual pigments and the nutritionally important retinol-binding proteins. The discussions then shift to animal carotenoids, carotenoid metabolism and transformations, including interesting stereochemical findings. This book also reviews studies of carotenoids in photosynthesis, the industrial importance of carotenoids, medical aspects, particularly the use of carotenoids in treatment against skin photosensitivity and their possible role in protection against cancer. The remaining chapters examine the effects of chemicals on carotenoid biosynthesis and its relevance to herbicide design. This book will be of value to carotenoid scientists and researchers.
