The book addresses the interactions between wetlands and human health and well-being. A key feature is the linking of ecology-health and the targeting of practitioners and researchers. The

environmental health problems of the 21st Century cannot be addressed by the traditional tools of ecologists or epidemiologists working in their respective disciplinary silos; this is clear from the emergence and re-emergence of public health and human well-being problems such as cholera pandemics, mosquito borne disease, and episodic events and disasters (e.g. hurricanes). To tackle these problems requires genuine cross-disciplinary collaboration; a key finding of the recently concluded Millennium Ecosystem Assessment when looking at human well-being and ecosystem health. This book brings the disciplines of ecology and health sciences closer to such a synthesis for researchers, teachers and policy makers interested in or needing information to manage wetlands and human health and well-being issues.

Report of the Secretary of Defense Department of the Navy

Unmanned aircraft systems (UASs) have become increasingly prevalent in and important to U.S. military operations. Initially serving only as reconnaissance or intelligence platforms,

they now carry out such other missions as attacking enemy forces. The swift expansion in their numbers and in the demand for their employment has, however, significantly increased demands on logistics and training systems. The challenge is not simply training system operators but also training operational forces and their commanders to integrate the systems into combat operations. Much of that aspect of training has thus far happened as units employ the systems in actual operations - essentially, on-the-job training. UAS training, particularly for the employment of UASs, now needs to be

integrated more formally and cost-effectively into service and joint training programs. This report develops a general concept for training military forces in employment of UASs and a framework for addressing the training requirements and discusses the limits of existing infrastructure in supporting UAS training.

Interoperability among services is another issue, because services have thus far mainly developed training suitable for their own needs. But the services have established a set of multiservice tactics, techniques, and procedures for UASs, which should facilitate

interoperability training. At present, units are not always ready for joint training, so the focus should be on improving training at the unit level in the employment of UAS capabilities, with the overall guiding principle being to "train as we fight."

This book provides the first full account of America's relations with the Islamic Republic of Iran from Jimmy Carter's presidency to Barack Obama's. It discusses all major facets of Iranian policy of interest to the United States: nuclear proliferation, revolutionary export and support for international terrorism, efforts to undermine the Israeli-Palestinian peace process, and violations of human rights. It compares developments in Iran to their perception in Washington, providing the clearest picture available yet of the discrepancies between the complex and elusive Iranian reality and its understanding in the United States.

The 1807-14 war in the Iberian Peninsula was one of the most significant and influential campaigns of the Napoleonic Wars. Sir Charles Oman's classic 7-volume history of the Peninsular War is one of the most important histories of the period ever written. The work of a brilliant historian and writer, it presents a large amount of detailed and valuable information in a very readable style. Volume 7 covers the period between August 1813 and the end of hostilities in April 1814, when Napoleon's forces were finally expelled from the Iberian Peninsula. Wellington's army invaded southern France, only halting its operations when news was received of Napoleon's abdication.

The events covered include the British siege and capture of St. Sebastian; the final campaigning in eastern Spain; Wellington's invasion of France; and the last actions of the war in the Battle of Toulouse and the French sortie from Bayonne. A chapter on the place of the Peninsular War in history concludes Oman's monumental work.

Open urban spaces are an ideal stage for public events. An important prerequisite for their design in an increasingly heterogeneous multicultural cityscape is the relationship

between design, use, and social function. The book documents both temporary as well as permanent installations of various kinds – from the open-air courtyard of a museum to the design of a river bank promenade, through to a city park.

Bringing the War Home
RAND Corporation

Although many books have been published on the Vietnam War, this is the first to chronicle the significant contributions of America's smallest armed service in that conflict. The U.S. Coast Guard worked and fought alongside its sister services for ten years, conducting a wide range of operations that have remained until now largely unknown to the public. In May 1965

Coast Guard cutters engaged the Viet Cong in the service's first combat since World War II, and it was not until April 1975 that it shut down its last LORAN-C station in Vietnam. Alex Larzelere's vivid, fast-paced depictions of combat operations along Vietnam's coasts and in the rivers and canals of the Mekong Delta benefit from his own service in Vietnam as a patrol boat skipper and from his interviews with seventy-five other Coast Guardsmen who were there. These on-the-scene descriptions together with the author's exhaustive research in official and private archives add up to a comprehensive

picture of the Coast Guard's wartime operations - operations that included junk and trawler interdiction, downed-pilot search and rescue, naval gunfire support, port security, merchant marine and navigation assistance, and training and support for the South Vietnamese Navy. Also documented here for the first time are the high-level negotiations among leaders of the Navy, Army, Air Force, and Coast Guard that provided for the employment of unique Coast Guard capabilities. Illustrated with dozens of official and private photos, many never before published, this

landmark history fills an important hole in the literature of both the Coast Guard and the Vietnam War and establishes a blueprint for future joint military cooperation. Scholarly in its approach yet written with verve and drama to appeal to a wider audience, the book sets the highest standard for military histories.

From Syria and Iraq to Ukraine, from AfPak to Libya, from Iran to Russia, and from the Persian Gulf to China, foreign correspondent Pepe Escobar, author of The Roving Eye column for Asia

Times/Hong Kong, crisscrosses what the Pentagon calls the "arc of instability." As Escobar tells it in the introduction, "the columns selected for this volume follow the period 2009-2014 - the Obama years so far. A continuum with previous volumes published by Nimble Books does apply. Globalistan, from 2007, was an extended reportage/warped travel book across the Bush years, where I argued the world was being plunged into Liquid War - alluding to energy flows but also to the liquid modernity character of post-modern war. Red Zone Blues, also from 2007, was a vignette - an

extended reportage centering on the Baghdad surge. And Obama does Globalistan, from 2009, examined how the hyperpower could embark on a "change we can believe in." The outcome, as these columns arguably reflect, is Empire of Chaos - where a plutocracy progressively projects its own internal disintegration upon the whole world." "You will find some key overlapping nations/the mes/expressions/acronyms in these columns; Iran, Iraq, Syria, Afghanistan, Pakistan, Central Asia, China, Russia, Ukraine, Pipelineistan, BRICS, EU, NATO, GCC, the

Global South, GWOT (the global war on terror), The New Great Game, Full Spectrum Dominance. You will also find a progressive drift towards not conventional war, but above all economic war - manifestations of Liquid War." Incrementally, I have been arguing that Washington's number one objective now is to prevent a full economic integration of Eurasia that would leave the U.S. as a non-hegemon, or worse still, an outsider. Thus the three-pronged strategy of "pivoting to Asia" (containment of China); Ukraine (containment of Russia); and beefing up NATO (subjugation of Europe, and NATO

as Global Robocop)." Book the ultimate trip to the Empire of Chaos, and see how the U.S. - and the West - are tackling the emergence of a multipolar world. In this riveting insider's chronicle, legendary Marine General "Brute" Krulak submits an unprecedented examination of U.S. Marines—their fights on the battlefield and off, their extraordinary esprit de corps. Deftly blending history with autobiography, action with analysis, and separating fact from fable, General Krulak touches the very essence of the Corps: what it means to be a Marine and the reason behind its consistently outstanding performance and reputation. Krulak also addresses the most basic but challenging

question of all about the Corps: how does it manage to survive—even to flourish—despite overwhelming political odds and, as the general writes, "an extraordinary propensity for shooting itself in the foot?" To answer this question Krulak examines the foundation on which the Corps is built, a system of intense loyalty to God, to country, and to other Marines. He also takes a close look at Marines in war, offering challenging accounts of their experiences in World War II, Korea, and Vietnam. In addition, he describes the Corps's relationship to other services, especially during the unification battles following World War II, and offers new insights into the decision-

making process in times of crisis. First published in hardcover in 1984, this book has remained popular ever since with Marines of every rank. Air University Au-1 Style and Author Guide United States Department of Defense In this first comprehensive comparison of left-wing violence in the United States and West Germany, Jeremy Varon focuses on America's Weather Underground and Germany's Red Army Faction to consider how and why young, middle-class radicals in prosperous democratic societies turned to armed struggle in efforts to overthrow their states. Based on a

wealth of primary material, ranging from interviews to FBI reports, this book reconstructs the motivation and ideology of violent organizations active during the 1960s and 1970s. Varon conveys the intense passions of the era--the heat of moral purpose, the depth of Utopian longing, the sense of danger and despair, and the exhilaration over temporary triumphs. Varon's compelling interpretation of the logic and limits of dissent in democratic societies provides striking insights into the role of militancy in contemporary protest movements and has wide implications for the United States'

current "war on terrorism." Varon explores Weatherman and RAF's strong similarities and the reasons why radicals in different settings developed a shared set of values, languages, and strategies. Addressing the relationship of historical memory to political action, Varon demonstrates how Germany's fascist past influenced the brutal and escalating nature of the West German conflict in the 60s and 70s, as well as the reasons why left-wing violence dropped sharply in the United States during the 1970s. Bringing the War Home is a fascinating account of

why violence develops within social movements, how states can respond to radical dissent and forms of terror, how the rational and irrational can combine in political movements, and finally how moral outrage and militancy can play both constructive and destructive roles in efforts at social change.
