Despite an extensive literature on homelessness there is surprisingly little work that investigates the roots of homelessness by tracking homeless people over time. In this fascinating and much-needed ethnographic study, Megan Ravenhill presents the results of ten years' research on the streets and in the hostels and day-centres of the UK, incorporating intensive interviews with 150 homeless and formerly homeless people as well as policy makers and professionals working with homeless people. Ravenhill discusses the biographical, structural and behavioural factors that lead to homelessness. Amongst the important and unique features of the study are: the use of life-route maps showing the circumstances and decisions that lead to homelessness, a systematic study of the timescales involved, and a survey of people's exit routes from homelessness. Ravenhill also identifies factors that predict those most vulnerable to homelessness and factors that prevent or considerably delay the onset of homelessness.

Over a million students have transformed adequate work into academic achievement with this best-selling text. HOW TO STUDY IN COLLEGE sets students on the path to success by helping them build a strong

foundation of study skills, and learn how to gain, retain, and explain information. Based on widely tested educational and learning theories, HOW TO STUDY IN COLLEGE teaches study techniques such as visual thinking, active listening, concentration, note taking, and test taking, while also incorporating material on vocabulary building. Questions in the Margin, based on the Cornell Note Taking System, places key questions about content in the margins of the text to provide students with a means for reviewing and reciting the main ideas. Students then use this technique--the Q-System--to formulate their own questions. The Eleventh Edition maintains the straightforward and traditional academic format that has made HOW TO STUDY IN COLLEGE the leading study skills text in the market. Robert Keppel explores in unflinching detail the monstrous patterns, sadistic compulsions, and depraved motives of serial killers. From the Lonely Hearts Killer who hunted the most desperate of women in 1950s America to such infamous symbols of evil as Jeffrey Dahmer, Ted Bundy, and John Gacy, these are the cases--horrifying, graphic and unforgettable--that Keppel ingeniously taps to shed light on the darkest corners of the pathological mind. Foreword by Ann Rule.

### **Holomorphic Morse Inequalities and Bergman Kernels** Butterworth-Heinemann

Introducing basic principles of plasma physics and their applications to space, laboratory and astrophysical plasmas, this new edition provides updated material throughout. Topics covered include single-particle motions, kinetic theory, magnetohydrodynamics, small amplitude waves in hot and cold plasmas, and collisional effects. New additions include the ponderomotive force, tearing instabilities in resistive plasmas and the magnetorotational instability in accretion disks, charged particle acceleration by shocks, and a more in-depth look at nonlinear phenomena. A broad range of applications are explored: planetary magnetospheres and radiation belts, the confinement and stability of plasmas in fusion devices, the propagation of discontinuities and shock waves in the solar wind, and analysis of various types of plasma waves and instabilities that can occur in planetary magnetospheres and laboratory plasma devices. With step-by-step derivations and self-contained introductions to mathematical methods, this book is ideal as an advanced undergraduate to graduate-level textbook, or as a reference for researchers.

Amphiphilic layers play essential roles in the behaviour of a great variety of disperse systems such as micelles, microemulsions and vesicles. They can also exist as isolated mono- or bilayers, or constitute extended liquid crystalline structures. Although the properties of these different systems may at first sight seem unrelated, theoretical interpretations of them depend on several common concepts. This was the reason for bringing together scientists working in this area for the International Winter School on the Physics of Amphiphilic Layers, which was held at Les Houches, 10-18 February, 1987. The topics treated in the proceedings volume are mono- and bilayers, interactive forces between layers (with special emphasis on steric forces), ordered structures (in particular swollen lamellar phases and defects), vesicles, micelles (including polymer-like systems), microemulsions (especially random bicontinuous structures) and porous media. The importance of thermal fluctuations in the amphiphilic layers is stressed. Recent results are presented and literature references allow readers not familiar with the subject to find any background information they require.

### **Motor Auto Repair Manual** Xulon Press

This NATO Advanced Research Workshop was held at a time when there was little consensus as to the mechanism for high temperature superconductivity, in the context of a world undergoing major changes in its political alignments and sense of the possibility for the future. It was characterized by generosity in the sharing of our uncertainties and speculations, as was appropriate for both the subject matter and the context. The workshop was organized, of necessity around the experimental work, as is this volume. Where the theoretical work is directly relevant to particular experiments, it is included in the appropriate sections with them. Most of the participants felt strongly that magnetic fluctuations played an important role in the mechanism for high  $T_c$ , although with the exception of the IIS R work reported by Luke showing results inconsistent with the anyon picture, and the work on flux phases by Lederer, the mechanism remained an issue in the background. A major focus was the phenomenological interpretation of the NMR data.

This new, fully illustrated catalogue on the celebrated progenitor of video art, Nam June Paik (1932-2006), brings together a host of scholars, artists, and Paik's own collaborators to illuminate the work of this innovative artist. An essay by curator Michelle Yun takes readers through Paik's highly original career, providing insight into his radical and witty experiments with technology, especially in relation to the body, which he viewed as vital platforms for the future of art, science, and popular culture. Scholars David Joselit and John Maeda contribute texts examining the artist's interest in new media and popular culture. A roundtable discussion with three of Paik's own artistic collaborators and contemporary artists' statements shed light on the collaborative process and Paik's enduring influence on artistic practice today. Drawing on the newly established Nam June Paik Archive at the Smithsonian American Art Museum, this book also features never-before-published primary sources that highlight Paik's prescient attitude towards the integration of increasingly indispensable technologies into modern life.
