Beyond simulation and algorithm development, many developers
increasingly use MATLAB even for product deployment in
computationally heavy fields. This often demands that MATLAB codes
run faster by leveraging the distributed parallelism of Graphics
Processing Units (GPUs). While MATLAB successfully provides high-level
functions as a simulation tool for rapid prototyping, the underlying
details and knowledge needed for utilizing GPUs make MATLAB users
hesitate to step into it. Accelerating MATLAB with GPUs offers a
primer on bridging this gap. Starting with the basics, setting up
MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it
then guides users through advanced topics such as CUDA libraries. The
authors share their experience developing algorithms using MATLAB,
C++ and GPUs for huge datasets, modifying MATLAB codes to better
utilize the computational power of GPUs, and integrating them into
commercial software products. Throughout the book, they demonstrate
many example codes that can be used as templates of C-MEX and CUDA
codes for readers' projects. Download example codes from the

A Guide to Starting Your Hedge Fund Newnes
How much risk should we take? A Short Guide to Risk Appetite sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite, and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.

The religions of ancient Greece and Rome are extinct. The so-called divinities of Olympus have not a single worshipper among living men. They belong now not to the department of theology, but to those of literature and taste. There they still hold their place, and will continue to hold it, for they are too closely connected with the finest productions of poetry and art, both ancient and modern, to pass into oblivion. We propose to tell the stories relating to them which have come down to us from the ancients, and which are alluded to by modern poets, essayists, and orators. Our readers may thus at the same time be entertained by the most charming fictions which fancy has ever created, and put in possession of information indispensable to every one who would read with intelligence the elegant literature of his own day.
