Frequently it is suggested that the 'golden age' of television was during the period 1950-1960. It is true that television almost ruined Hollywood's fortunes during this period. But if this was the authentic golden age, then it was an age of black and white, somewhat limited creativity, poor reception, lack of competition (except in the United States) and – by and large – public service broadcasting. However, if we take 1950 as a generic 'starting point' for modern television broadcasting, then we talk about a kind of prehistoric stage of the medium – in which it remained for the best part of three decades. The younger days of broadcasting were the 1980s; the time when commercial television started on a large scale and, in this youth, was getting younger in terms of programming. Luxembourg-based SES Astra appeared on the scene at exactly this time. Astra was instrumental in the dramatic developments in television that we have witnessed since then. This is the story we want to tell in this book. Without satellite technology and the success of satellite reception, without the resulting mass-market penetration of

television sets and general economic prosperity we would not have the necessary base ingredients to make the great leap forward into digital, into HDTV, 3D-television, and the prospects of Ultra High Definition now in sight.

Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Advanced Automotive Fault Diagnosis is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.

Marie and her mother, Allie, who was pregnant with Rose, were deserted by Marie's father when Marie was two years old. Allie was left with no food or money to pay bills, so she had to write to her papa, Cassie, for help. He went to Ada, Oklahoma, and took them back to Twin Acres, a 600-acre farm in Arkansas. The farm was so named because it was owned by Cassie and his twin brother, Willie. It was a successful farm and a wonderful place to grow up. Then came the Crash of '29 - there was no money, but there was food and a place to live. Still struggling with the Great Depression, our country entered WWII. The Army decided Twin Acres was to be a chicken farm to help feed soldiers at a nearby base. Eventually they also claimed Mal,

Marie's new husband, and sent him to North Africa as a medic, where he was captured by the Germans. Mal Jr. grew up to follow Grandfather Cassie's footsteps on the farm, as did his son. Twin Acres flourished with each generation, but when Marie and her sister, Rosie, were both widowed they made some drastic life changes.

What can we tell about the future of automobiles and the industries that make them by examining their past? Wormald and Rennick trace the history of powered land transport, the rise and fall of the railways, the spectacular rise of the automobile, and what might come next. Delving into the mighty and complex automotive industry, following the growth of the markets and production, this book illustrates the globalization of vehicle manufacturers and component suppliers, giving form to the development of the industry's business model. A key factor in an auto-industry's successes and failures is the often-difficult relationship it has with government, which varies in nature from country to country. As an illustrative case, Wormald and Rennick present and analyse the entire lifecycle of Australia's automotive history - including its birth, growth, functioning and death - and its shifting relationship with the government that supported it.

The recent financial crisis has demonstrated that governments continuously seek to steer their economies rather than leaving them to free markets. Despite the ambitions of

international economic cooperation, such interventionism is decidedly local. Some politicians even proudly evoke "economic patriotism" to justify their choices. This volume links such populism to a specific set of tensions – the paradox of neo-liberal democracy – and argues that the phenomenon is ubiquitous. The mandate of politicians is to defend the economic interests of their constituents under conditions where large parts of economic governance are no longer exclusively within their control. Economic patriotism is one possible reaction to this tension. As old-style industrial policy and interventionism gained a bad reputation, governments had to become creative to assure traditional economic policy objectives with new means. However, economic patriotism is more than just a fashionable word or a fig leaf for protectionism. This volume employs the term to signal two distinctions: the diversity of policy content and the multiplicity of territorial units it can refer to. Comparing economic interventionism across countries and sectors, it becomes clear that economic liberalism will always be accompanied by counter-movements that appeal to territorial images. This book was published as a special issue of the Journal of European Public Policy.

A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace.
