In recent years there have been dramatic changes in the public perception of gasoline, or petrol, mainly as a result of concern about the environment. This has necessitated changes in the composition of the fuel itself, such that modified fuel is now mandatory in certain parts of the USA. These reduced-emission fuels have now reached Europe and elsewhere. Motor Gasoline provides the latest information on the legislation and technology involved for oil companies producing motor fuel, while looking at the implications for the industry and the benefits for the environment. It also looks at possible alternatives to fuels for spark ignition engines, the importance of which will grow as environmental pressure increases, and oil reserves are exhausted. Motor Gasoline should be read by all students of fossil fuel and other energy resources, as well as oil workers, engineers and environmentalists. It will also provide an enlightening read for anyone concerned about the ecological effects of the oil and car industries, amongst the most environmentally significant of all humanity's activities.

Paradoxes of internationalization deals with British and

German trade union responses to the internationalization of corporate structures and strategies at Ford and General Motors between the late 1960s and the early twenty-first century. The book is based on research in numerous archives in Britain, Germany and the United States. The book points to the paradoxical effects of internationalization processes. First, it demonstrates how internationalization reinforced trade unions' national identities and allegiances. Second, the book highlights that internationalization made domestic trade union practices more similar in some respects, while it simultaneously contributed to the re-creation of diversity between and within the two countries. Third, the book shows that investment competition was paradoxically the most important precondition for the emergence of cross-border cooperation initiatives. The book will be of interest to academics and students in a range of disciplines from comparative industrial relations, to international political economy, business studies and transnational history.

The untold story of Britain's oldest car makerMany previously unpublished images from the vaults of VauxhallA view from the inside that has been untold until nowOf interest to the motorcar historian and modellers Vauxhall has been making cars in Britain for longer than anyone else. The first Vauxhall car left a cramped Thames-side works in 1903. Moving to Luton in 1905, Vauxhall became famous as a maker of sporting and luxury cars. Bought by the American giant General Motors, the company entered the era of mass production and, with the addition of Bedford trucks and vans, became one of the top five UK producers. After the Second World War, Vauxhall became the household name it is today with models such as Viva, Astra, Cresta, Victor, Nova, Cavalier and Vivaro. The journey from the Thames to today's plants at Ellesmere Port and Luton is full of twists, turns, dramas and triumphs, and continues with the announcement of the sale of General Motors European operations to the PSA Groupe. The author worked at Vauxhall for 38 years, from apprentice to boardroom. He has told the Vauxhall story with the benefit of years of experience and a lifelong passion for the marque.

For the world's leading car-makers, the early 1990s brought radical changes. The reports published by MIT shocked management in European and American industries. Former major companies had to face consequences no one had expected. The assembly-lines were reorganized in order to achieve higher quality at lower costs. Five years after the MIT report, this book poses the question: What are the results of this revolution in work organization? Scientists and practitioners, many of them involved in earlier reports, evaluate the changes to the automotive industry in Europe and Japan. An insight into recent concepts in automation and the organization of production.

The Rover K-Series Engine Haynes Manuals
“One of the most acute books about management and how companies work in practice that I have read in a long time. If anyone wants to know exactly how the U.S. auto industry got into trouble, here is your guide.” —John Gapper, FINANCIAL TIMES When Bob Lutz got into the auto business in the early 1960s, CEOs knew that if you captured the public’s imagination with innovative car design and top-quality craftsmanship, the money would follow. The “car guys” held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM’s leadership began to put its faith in numbers and spreadsheets. Determined to eliminate the “waste” and “personality worship” of the bygone creative leaders, management got too smart for its own good. With the bean counters firmly in charge, carmakers, and much of American industry, lost their single-minded focus on product excellence and their competitive advantage. Decline soon followed. In 2001, General Motors hired Lutz out of retirement with a mandate to save the company by making great cars again. As vice chairman, he launched a war against the penny-pinching number crunchers who ran the company by the bottom line and reinstated a focus on creativity, design, and cars and trucks that would satisfy GM’s customers. Lutz’s commonsense lessons,

combined with a generous helping of fascinating anecdotes, will inspire readers in any industry.
