#1 "New York Times" bestselling author Frederick Forsyth's unforgettable novel of a conspiracy, a killer, and the one man who can stop him... He is known only as "The Jackal"--a cold, calculating assassin without emotion, or loyalty, or equal. He's just received a contract from an enigmatic employer to eliminate one of the most heavily guarded men in the world--Charles De Gaulle, president of France. It is only a twist of fate that allows the authorities to discover the plot. They know next to nothing--only that the assassin is on the move. To track him, they dispatch their finest detective, Claude Lebel, on a manhunt that will push him to his limit, in a race to stop an assassin's bullet from reaching its target.

Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes and characteristics of the user. In this context, the concept of the human-machine system has become established. In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package, design of displays and control elements, of environmental ergonomics such as lighting, sound, vibrations, climate and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This book is a translation of the original German 1st edition *Automobilergonomie* by Heiner Bubb, Klaus Bengler, Rainer E. Gr ü nen & Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2015. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

All students of philosophy will relate to the concepts of selfhood, nature, karma and liberation. Here are views and answers to the most important questions. How is self identified? What are the causes and effects in nature? Are our actions determined? What is freedom for a human being? What happens after death? The Essence of Vedanta examines issues of existential philosophy from the viewpoint of the Veda, the most ancient and sacred of Indian scriptures, and also outlines the work of Sankara, the early medieval master of Vedanta's dominant form, Advaita. The foundation of all Vedic teaching lies in the universal truth that human nature reflects God (Brahman), who exists in every living thing. An individual needs no salvation therefore, because he or she is never lost, but merely living in ignorance of his or her true nature. Brian Hodgkinson offers readers insight into, and discussion of, the fundamental questions of the Vedic system concerning self-realization, such as knowledge versus ignorance, the self, consciousness, free will, nature, time, the mind, language, law and society. His fascinating appraisal reveals the profound nature of the Veda and its practices. With its tolerance of other faiths, and ultimately uplifting spiritual message, it is a discipline that chimes with our 21st century needs and preoccupations.

An exploration of current and possible future hydrogen storage technologies, written from an industrial perspective. The book describes the fundamentals, taking into consideration environmental, economic and safety aspects, as well as presenting infrastructure requirements, with a special focus on hydrogen applications in production, transportation, military, stationary and mobile storage. A comparison of the different storage technologies is also included, ranging from storage of pure hydrogen in different states, via chemical storage right up to new materials already under development. Throughout, emphasis is placed on those technologies with the potential for commercialization.

Aline Leon In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.

This book celebrates the many important contributions to philosophy by one of the leading philosophers in the analytic field, Michael Devitt. It collects seventeen original essays by renowned philosophers from all over the world. They all develop themes from Devitt's work, thus discussing many fundamental issues in philosophy of linguistics, theory of reference, theory of meaning, methodology, and metaphysics. In a long final chapter, Devitt himself replies to the contributors. In so doing, he further elaborates his views on various of these issues, for example defending his claim (in opposition to Chomskyan orthodoxy) that languages are external rather than internal; his well-known causal theory of reference; his " shocking " idea that meanings can be causal, non-descriptive, modes of presentation; his methodological naturalism; his commitment to scientific realism; and his version of biological essentialism. The volume will appeal to all scholars and students interested in contemporary theoretical analytic philosophy, and will be a must-read for any serious researcher in philosophy of language. It provides a deep insight into the work of one of the most important living philosophers, and will help readers to better understand language and reality from a naturalistic perspective.

The book explains the principles and fundamentals of Green Analytical Chemistry (GAC) and highlights the current developments and future potential of the analytical green chemistry-oriented applications of various solutions. The book consists of sixteen chapters, including the history and milestones of GAC; issues related to teaching of green analytical chemistry and greening the university laboratories; evaluation of impact of analytical activities on the environmental and human health, direct techniques of detection, identification and determination of trace constituents; new achievements in the field of extraction of trace analytes from samples characterized by complex composition of the matrix; "green" nature of the derivatization process in analytical chemistry; passive techniques of sampling of analytes; green sorption materials used in analytical procedures; new types of solvents in the field of analytical chemistry. In addition green chromatography and related techniques, fast tests for assessment of the wide spectrum of pollutants in the different types of the medium, remote monitoring of environmental pollutants, qualitative and comparative evaluation, quantitative assessment, and future trends and perspectives are discussed. This book appeals to a wide readership of the academic and industrial researchers. In addition, it can be used in the classroom for undergraduate and graduate Ph.D. students focusing on elaboration of new analytical procedures for organic and inorganic compounds determination in

different kinds of samples characterized by complex matrices composition. Jacek Namieńnik was a Professor at the Department of Analytical Chemistry, Gdańsk University of Technology, Poland. Justyna Płotka-Wasyłka is a teacher and researcher at the same department.
