Numerical evidence is everywhere. And libraries are among the most abundant producers and storehouses of such evidence, as well as a key contact to numbers held elsewhere. But not all of this data is collected for the benefit of our users; some are integral to the functioning of the library itself. The papers in this collection run the gamut from library administrators addressing how to make data presentations appealing and effective, to an article on applying capital budgeting models to libraries, to a simple way to integrate Excel pivot tables with SQL stored procedures to create an amazingly elegant tool for vendor data analysis and visualization. They also cover specialized scenarios within, for example, the worlds of reference, collection development, serial acquisitions, web site design, and bibliographic instruction

Reducing prices paid for goods and services is the most direct way for many manufacturers to increase profitability. According to authors Kuzdrall and Britney it is possible to achieve this "profit leverage effect" without switching suppliers or even requiring suppliers to reduce prices. Discount Schedule Analysis (DSA), an analytic technique delineated in this book, shows corporate buyers how to exploit printed price quantity discount schedules. Corporate vendors can employ the same techniques to forestall demands for price concessions.

This book provides a blueprint of how to develop a discipline for process management that applies to any type of orientation. As the economy moves toward a services orientation, companies are struggling with how to improve their offerings. Process management is a key component of the services that companies provide, and author Sue Conger has written a helpful tool to learn more of this key component now helping companies around the world. This book has three main parts: mapping, improvement, and error-proofing and metrics. In the first part—mapping—the reader will learn how to map a process so that the map is immediately understandable for identifying the roles, work steps, and automation support used in process delivery. The second part improvement—provides a series of techniques for defining, prioritizing, and analyzing problems from several perspectives. The first perspective is called “leaning,” and its purpose is to remove waste from an existing process. The second perspective is “cleaning,” during which the remaining steps following leaning are analyzed for possible improvement. The third perspective is “greening,” which explores opportunities and trade-offs for outsourcing, coproduction, and environmental improvements related to the process. The final part of the book—error-proofing and metrics—presents several techniques for ensuring risk mitigation for the new process and for measuring changes that define their impacts and discusses a method for proposing changes to executives in a “case for change.” And throughout this book, Conger provides a blueprint of how to develop a discipline for process management that applies to any type of orientation.
