One of our “best known and most influential business scholars” (Boston Globe), best-selling author Rosabeth Moss Kanter tackles America’s most urgent domestic issue. Americans are stuck. We live with travel delays on congested roads, shipping delays on clogged railways, and

delays on repairs, project approvals, and funding due to gridlocked leadership. These delays affect us all, whether you are a daily commuter, a frequent flyer, an entrepreneur, an online shopper, a job-seeker, or a community leader. If people can't move, if goods are delayed, and if information networks can't connect, then economic opportunity deteriorates and social inequity grows. We have been stuck for too long, writes Harvard Business School professor and best-selling author Rosabeth Moss Kanter. In *Move*, Kanter visits cities and states across the country to tackle our challenges—and reveal solutions—on the roads and rails, and in our cities, skies, and the halls of Washington, D.C. We meet a visionary engineer and public servant

---

spearheading an underwater tunnel in Miami to streamline port operations and redirect constant traffic from the city center. We see mayors partnering with large corporations and nimble entrepreneurs to unveil parking apps, bike-sharing programs, and seamless Wi-Fi networks in greener, more vibrant, more connected cities. And we learn about much-needed efforts—such as dynamic tolls on highways and fees based on vehicle miles traveled—to reduce our dependence on the outmoded gasoline tax in our new electric car age. It all adds up to a new vision for American mobility, where local leaders shape initiatives without waiting for Congress to act, and ambitious companies partner with governments to tackle projects that serve the public good, create jobs, and

improve quality of life while providing healthy sources of investment. With unique insight and unrivaled expertise, Kanter gives us a sweeping look across America, revealing the innovative projects, vital leaders, and bold solutions that are moving our transportation infrastructure toward a cleaner, faster, and more prosperous future.

This book explains the design and fabrication of any electronic enclosure that contains a printed circuit board, from original design through materials selection, building and testing, and ongoing design improvement. It presents a thorough and lucid treatment of material physical properties, engineering, and compliance considerations such that readers will understand concerns that exist with a design (structural, environmental, and regulatory) and what is needed to successfully enter the marketplace. To this end, a main thrust of this volume is on the “commercialization” of electronic products when an enclosure is needed. The book targets the broadest audience tasked with design and manufacture of an enclosure for an electronic product, from mechanical/industrial engineers to designers and technicians. Compiling a wealth of

information on relevant physical phenomena (strength of materials, shock and vibration, heat transfer), the book stands as a ready reference on how and where these key properties may be considered in the design of most electronic enclosures.

This is an introduction by the author that explains how to use PHM technology's prognostic analysis to create and process telemetry and use proprietary predictive algorithms as part of a PHM program and it includes an explanation why probability analysis should no longer be used to quantify spacecraft equipment and space vehicle reliability in probabilistic values, which is wrong, since equipment failures are not

---

random, instantaneous nor memory-less as is required to use probability analysis, but in certainty The author includes an explanation of the prognostics and health management (PHM) technology and some of the complex tools and concepts he develop for a successful prognostics and health management (PHM) program that was used by the author to predict satellite subsystem and navigation payload equipment failures with 100% certainty, The author includes examples of the author's results from using a prognostic analysis on equipment telemetry from spacecraft such as GPS MEO satellites, NASA LEO satellites and commercial, geostationary satellites and on the United Technologies/air Force Titan, General Dynamics Atlas E/F and Aerospaciale's Ariane launch vehicles. The PHM predictive algorithms discussed are proprietary and not

included, but their use and and functionality is well described. PHM technology requires a significant background in the following areas to understand the concepts of PHM including high level mathematical analysis, fixed power electrical circuit design and test , mechanical assembly design and test, orbital mechanics, probability reliability analysis, space systems engineering, aerospace engineering, predictive science, RF and digital communications science and analog and digital signal processing. This book can be used in conjunction with the author's several other books he authored about using PHM technology to other industries to stop the premature failures of equipment and products, reducing or eliminating product returns, lowering production costs while increasing product lines profit margins.

The Federal Bureau of Investigation (FBI) is in the process of developing a modern information technology (IT) systemâ€"the Trilogy programâ€" that is designed to provide a high-speed network, modern workstations and software, and an applicationâ€"the Virtual Case File (VCF)â€"to enhance the ability of agents to organize, access, and analyze information. Implementation of this system has encountered substantial difficulties, however, and has been the subject of much investigation and congressional concern. To help address

these problems, the FBI asked the National Research Council (NRC) to undertake a quick review of the program and the progress that has been made to date. This report presents that review. The current status of four major aspects of the program—the enterprise architecture, system design, program management, and human resources—are discussed, and recommendations are presented to address the problems.
