Poetry. This collection of prose poems explores the expansiveness of language as it ranges over particle physics and cosmology, and in how texts network with other texts (some of the poems were generated from other texts, from Google searches, through "interactions" with random texts). Interstitial poems between sections provide structure for the book; built entirely from language that appears elsewhere in the book, they progress according to the Fibonacci sequence, which determines first the number of words in each poem, then the number of words and the number of syllables as the numbers grow larger. Also available from SPD is Brian Clement's collection *DISAPPOINTED PSALMS*. He edits the small press *Firewheel Editions* and its *Sentence: A Journal of Prose Poetics* and coordinates the MFA in Professional Writing at Western Connecticut State University.

Seventy-nine Short Essays on Design brings together the best of designer Michael Bierut's critical writing—serious or humorous, flattering or biting, but always on the mark. Bierut is widely considered the finest observer on design writing today. Covering topics as diverse as Twyla Tharp and ITC Garamond, Bierut's intelligent and accessible texts pull design culture into crisp focus. He touches on classics, like Massimo Vignelli and the cover of *The Catcher in the Rye*, as well as newcomers, like McSweeney's Quarterly Concern and color-coded terrorism alert levels. Along the way Nabakov's *Pale Fire*; Eero Saarinen; the paper clip; *Celebration, Florida*; the planet Saturn; the ClearRx pill bottle; and paper architecture all fall under his pen. His experience as a design practitioner informs his writing and gives it truth. In *Seventy-nine Short Essays on Design*, designers and nondesigners alike can share and revel in his insights.

A Symphony of Animals Simon and Schuster

This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for

embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

Could you survive a backcountry vehicle problem? "Live Long to Wander - Basic Survival for Vehicle-Supported Adventures" is for anyone who ventures into the wilderness - off-roaders, overlanders, hikers, mountain bikers, kayakers, all outdoor enthusiasts. This book can help you comfortably survive a minor or major mishap, breakdown, or accident in the remote backcountry when driving your full-size 4WD vehicle, ATV (Quad), UTV (Side-by-Side), Dual Sport Motorcycle, or Snowmobile. Vehicle complications can occur at anytime, so being prepared is very important. With the knowledge presented in this book, you can remain comfortable for several hours, a couple of days, or even a week or two in the backcountry should a recreational adventure or work-related incident go bad. Topics include: 1) The Will to Live, 2) Survival Kit, 3) Survival Shelter Building, 4) Survival Fire Building, 5) Disinfecting Water in the Field, 6) Signaling for Help. Even when a trip into the wilderness goes as planned, the knowledge offered within the pages of this book can be helpful on every outing. At the very least, being prepared will help you relax.

Analyzing Computer System Performance with Perl: PDQ William Morrow & Company

In this book, Reta Beebe provides a full introduction to the jovian system, describing the planet's atmosphere, winds, and the swirling clouds, such as the Great Red Spot, that they create. She discusses models of the interior of the planet, the differences between its satellites (or moons), its equatorial rings of debris, and its magnetosphere: the interactive region around the planet created by its magnetic field. Considered a substellar companion to the sun - because it radiates more heat than it receives from the sun and has a similar chemical composition - Jupiter is thought to have no solid surface below the visible clouds. Among astronomers, it is seen as a laboratory in which to test theories of planet and star formation. Reviewing the history of discoveries about Jupiter, Beebe shows how our early earthbound knowledge was greatly expanded by the data from the Pioneer and Voyager spacecraft that journeyed past the planet in the 1970s. She also speculates - drawing on the sophisticated models and theorems that underlie all planetary science - on the results of the Galileo Mission (launched in 1989, it is expected to fly by Jupiter in 1995) and discusses the possibly more dramatic July 1994 collision of the Comet Shoemaker-Levy 9, hurtling toward Jupiter at 130,000 miles an hour with a mass of nearly six trillion tons.

Saturn is back in the news! The Cassini/Huygens spacecraft, a joint venture by NASA and the European Space Agency, is on its way to Saturn, where it will arrive in July 2004. During 2005 it will explore beneath the clouds of Titan, Saturn's largest moon and potential home for extraterrestrial life. Written by an established space historian and experienced author, *Mission To Saturn - Cassini and the Huygens Probe* is an up-to-date and timely review of our knowledge of Saturn and its enigmatic moon, Titan, on which the Huygens probe will land to search for prebiotic chemistry or even life. It explains how the mission was planned, how it will operate and, as the spacecraft nears its target, puts into context the discoveries that are sure to follow from this once-in-a-lifetime mission.
