The legacy of Leo Hendrik Baekeland and his development of phenol formaldehyde resins are recognized as the cornerstone of the Plastics Industry in the early twentieth century, and phenolic resins continue to flourish after a century of robust growth. On July 13, 1907, Baekeland led his "heat and pressure" patent related to the processing of phenol formaldehyde resins and identified their unique utility in a plethora of applications. The year 2010 marks the Centennial Year of the production of phenolic resins by Leo Baekeland. In 1910, Baekeland formed Bakelite GmbH and launched the manufacture of phenolic resins in Erkner in May 1910. In October 1910, General Bakelite began producing resins in Perth Amboy, New Jersey. Lastly, Baekeland collaborated with Dr. Takamine to manufacture phenolic resins in Japan in 1911. These events were instrumental in establishing the Plastics Industry and in tracing the identity to the brilliance of Dr. Leo Baekeland. Phenolic resins remain as a versatile resin system featuring either a stable, thermoplastic novolac composition that cures with a latent source of formaldehyde (hexa) or a heat reactive and perishable resole composition that cures thermally or under acidic or special basic conditions. Phenolic resins are a very large volume resin system with a worldwide volume in excess of 5 million tons/year, and its growth is related to the gross national product (GNP) growth rate globally.

'The book is at once accessible, evidence-based, practical and eminently readable...Readers will find in this book a treasury of learners' voices guiding us towards the goal of more effective learning in classrooms' - International Network for School Improvement 'This book promotes an ambitious and inspiring conception of meaningful pedagogy and works to applaud those teachers who are determined to reflect upon, enquire into, and then facilitate "effective learning". A coherent and structured case is made for the primacy of "learning" over "work" - Learning & Teaching Update This book addresses an important, and too seldom addressed issue: learning. Not teaching, not performance, not "work": this book really is about learning, what makes learning effective and how it may be promoted in classrooms. The authors take the context of the classroom seriously, not only because of its effects on teachers and pupils, but because classrooms are notorious as contexts which change little. Rather than providing yet more tips, they offer real thinking and evidence based on what we know about how classrooms change. Four major dimensions of promoting effective learning in classrooms are examined in depth: Active Learning; Collaborative Learning; Learner-driven Learning and Learning about Learning. Evidence from practising teachers in the form of case studies and examples, and evidence from international research in the form of useful ideas and frameworks is included.
