a ripping yarn and an exercise in virtuoso technique.

Evaluation Guide (Windows) for MicroStrategy 9.5 Routledge

Android on x86: an Introduction to Optimizing for Intel®

Architecture serves two main purposes. First, it makes the case for adapting your applications onto Intel's x86 architecture, including discussions of the business potential, the changing landscape of the Android marketplace, and the unique challenges and opportunities that arise from x86 devices. The fundamental idea is that extending your applications to support x86 or creating new ones is not difficult, but it is imperative to know all of the technicalities. This book is dedicated to providing you with an awareness of these nuances and an understanding of how to tackle them. Second, and most importantly, this book provides a one-stop detailed resource for best practices and procedures associated with the installation issues, hardware optimization issues, software requirements, programming tasks,

and performance optimizations that emerge when developers consider the x86 Android devices.

Optimization discussions dive into native code, hardware acceleration, and advanced profiling of multimedia applications. The authors have collected this information so that you can use the book as a guide for the specific requirements of each application project. This book is not dedicated solely to code; instead it is filled with the information you need in order to take advantage of x86 architecture. It will guide you through installing the Android SDK for Intel Architecture, help you understand the differences and similarities between processor architectures available in Android devices, teach you to create and port applications, debug existing x86 applications, offer solutions for NDK and C++ optimizations, and introduce the Intel Hardware Accelerated Execution Manager. This book provides the most useful information to help you get the job done quickly while utilizing best practices.

If you read technology news, you ' ll notice it ' s not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I ' ve collected what happened in the industry in 2013 and

make predictions on what will and won ' t happen in 2014.

You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I ' m surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It ' s often overlooked that the technology industry is an industry. By that I mean its

main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who 's up, who 's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed

with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore 's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new

paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it

covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters. Table of Contents Preface Introduction Chapter 1: 2014 Predictions Chapter 2: Mobile Marketshare Chapter 3: Apple Chapter 4: Samsung Chapter 5: Google Chapter 6: Microsoft Chapter 7: Nokia Chapter 8: Blackberry Chapter 9: Amazon Chapter 10: Social Media Chapter 11: Yahoo Chapter 12: Carriers Chapter 13: 2013 Predictions Chapter 14: Essays Appendix Studying the Usual Suspects Addison-Wesley Full-color guide to Samsung's exciting new tablet device! " The twenty-first-century telecommunications landscape is radically different from the one that prevailed as recently as the last decade of the twentieth century.

Robert Litan and Hal Singer argue that given the speed of innovation in this sector, the Federal Communications Commission's outdated policies and rules are inhibiting investment in the telecom industry, specifically in fast broadband networks. This pithy handbook presents the kind of fundamental rethinking needed to bring communications policy in

line with technological advances.

Fast broadband has huge societal benefits, enabling all kinds of applications in telemedicine, entertainment, retailing, education, and energy that would have been unthinkable a few years ago. Those benefits would be even greater if the FCC adopted policies that encouraged more broadband providers, especially wireless providers, to make their services available in the roughly half of the country where consumers currently have no choice in wireline providers offering download speeds that satisfy the FCC's current standards. The authors' recommendations include allowing broadband providers to charge for premium delivery services; embracing a rule-of-reason approach to all matters involving vertical arrangements; stripping the FCC of its merger review authority because both the Federal Trade Commission and the Justice Department have the authority to stop anticompetitive mergers; eliminating the FCC's ability to condition spectrum purchases on the identity, business plans, or spectrum holdings of a

bidder; and freeing telephone companies from outdated regulations that require them to maintain both a legacy copper network and a modern IP network. These changes and others advanced in this book would greatly enhance consumer welfare with respect to telecommunications services and the applications built around them."
