have had this problem before.  
on the side of the drum you  
will notice there are "fins",  
these fins act as chip

---

pushers/air pushers. after time the fins become worn, therefore reducing the amount of air and chips being pushed through the chute. if there is less mass and less air flowing, the chips don't shoot as far. my 1400 had been doing this for awhile and my local vermeer couldn't figure it
