"The book contains a full description of the electrotype process, critical to many subsequent photomechanical patents and methods ... The electrotype process was important in photomechanical printing in that it was first used to copy daguerreotypes and was also used in experiments as a printing surface. Eventually Paul Pretsch used it with his photo-galvano-graphic process, and it was used continuously thereafter as a device to duplicate surfaces for printing in practically all the relief processes and some intaglio."--Hanson Collection catalog, p. 8 Hydrographic Manual Demos Medical Publishing McLoughlin and Lewis provide extensive information on the use of testing, computers and other assessment tools.
