Handbook of Australian School Psychology F.A. Davis

This handbook addresses the current state and practice of school psychology with a focus on standards unique to Australia, including historical, legal, ethical, practical, and training factors. It provides a compilation of the most current research-based practices as well as guidelines for evidence-based assessment and intervention for common conditions (e.g., autism, depression, learning disabilities) and for delivering appropriate services to targeted student populations (e.g., LGBT, gifted, medical issues). Chapters discuss the application of national and international school psychology practices within the Australian educational and psychological structure. The third in an informal series of books about parallel processing for Artificial Intelligence, this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations. However, no assumption is made about the kind of parallelism to be used. Transputers, Connection Machines, farms of workstations, Cellular Neural Networks, Crays, and

other hardware paradigms of parallelism are used by the authors of this collection. The papers arise from the areas of parallel knowledge representation, neural modeling, parallel non-monotonic reasoning, search and partitioning, constraint satisfaction, theorem proving, parallel decision trees, parallel programming languages and low-level computer vision. The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history. This volume provides the reader with a snapshot of the state of the art in Parallel Processing for Artificial Intelligence.

Gathering a broad range of new developments in one place, *The Handbook of Emergent Technologies in Social Research* offers comprehensive, up-to-date thinking on technological innovations. In addition to addressing how to effectively apply new technologies—such as the internet, mobile technologies, geospatial technologies (GPS), and the incorporation of computer-assisted software programs (CAQDAS) to qualitative, quantitative, and mixed-methods approaches to research projects—many chapters provide in-depth examples of practices within both disciplinary and interdisciplinary environments and outside the academic world in multi-media laboratories and research institutes. Not only an authoritative view of cutting-edge technologies and their applications, the Handbook examines the costs and benefits of utilizing new technologies on the research process, the potential misuse of these techniques for methods practices, and the ethical and moral dimensions of emergent technologies, especially with regard to issues of surveillance and privacy. *The Handbook of Emergent Technologies in Social Research* is an essential resource for research methods courses in various fields, including the social sciences, education, communications, computer science, and health services, and an indispensable guide for social researchers looking to incorporate emerging technologies into their methods and practice.

With gender as its central focus, this book offers a transnational, multi-faceted understanding of citizenship as legislated, imagined, and exercised since the late eighteenth century. Framed around three crosscutting themes - agency, space and borders - leading scholars demonstrate what historians can bring to the study of citizenship and its evolving relationship with the theory and practice of democracy, and how we can make the concept of citizenship operational for studying past societies and cultures. The essays examine the past interactions of women and men with public authorities, their participation in civic life within various kinds of polities

and the meanings they attached to their actions. In analyzing the way gender operated both to promote and to inhibit civic consciousness, action, and practice, this book advances our knowledge about the history of citizenship and the evolution of the modern state.
