With gender as its central focus, this book offers a transnational, multi-faceted understanding of citizenship as legislated, imagined, and exercised since the late eighteenth century. Framed around three crosscutting themes - agency, space and borders - leading scholars demonstrate

what historians can bring to the study of citizenship and its evolving relationship with the theory and practice of democracy, and how we can make the concept of citizenship operational for studying past societies and cultures. The essays examine the past interactions of women and men with public authorities, their participation in civic life within various kinds of polities and the meanings they attached to their actions. In analyzing the way gender operated both to promote and to inhibit civic consciousness, action, and practice, this book advances our knowledge about the history of citizenship and the evolution of the modern state.

The third in an informal series of books about parallel processing for Artificial Intelligence, this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations. However, no assumption is made about the kind of parallelism to be used. Transputers, Connection Machines, farms of workstations, Cellular Neural Networks, Crays, and other hardware paradigms of parallelism are used by the authors of this collection. The papers arise from the areas of parallel knowledge representation, neural modeling, parallel non-monotonic reasoning, search and partitioning, constraint satisfaction, theorem proving, parallel decision trees, parallel programming languages and low-level computer vision. The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history. This volume provides the reader with a snapshot of the state of the art in Parallel Processing for Artificial Intelligence.

Research into early childhood transitions has become a field in its own right. It is increasingly understood that a positive start in any new setting can influence the child's engagement, sense of belonging, well-being, progression in learning, and agency, and may be dependent on the insight of educators and families, and yet there is no research methodology or research methods book dedicated to this growing field of study. Including 27 chapters written by researchers from the UK, New Zealand, the USA, Sweden, Iceland, Australia and Canada this handbook presents an overview of the field exploring its current debates, reflects on its history, and offers suggestions for the future of the field. This book is an essential reference point for anyone studying or undertaking research into transitions in early childhood.
