Students with Both Gifts and Learning Disabilities JP

Medical Ltd

We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading, writing, or math, but who could solve seemingly any problem with computers, or build the most intricate structures with Legos, or could draw beautiful pictures, or could tell the most creative stories but ended up in tears when asked to write it out. How is it possible to have so much talent in some areas and yet to appear to have a disability in another? What resources are

available for these students? How can we ensure that these students' abilities are nurtured and developed? Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers. We have ourselves been addressing related questions for some time. Our group at the PACE Center at Yale has explored the development of abilities, competencies and expertise that allow people to be successful in life. Through this work, we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is traditionally thought of as intelligence. We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones, and often not even the most important ones, that allow people to be successful in

the world.

The American City & County Thieme With gender as its central focus, this book offers a transnational, multi-faceted understanding of citizenship as legislated, imagined, and exercised since the late eighteenth century. Framed around three crosscutting themes - agency, space and

borders - leading scholars demonstrate what historians can bring to the study of citizenship and its evolving relationship with the theory and practice of democracy, and how we can make the concept of citizenship operational for studying past societies and cultures. The essays examine the past interactions of women and men with public authorities, their participation in civic life within various kinds of polities and the meanings they attached to their actions. In analyzing the way gender operated both to promote and to inhibit civic consciousness, action, and practice, this book advances our knowledge about the history of citizenship and the evolution of the modern state.

The third in an informal series of books about parallel processing for Artificial Intelligence, this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations. However, no assumption is made about the kind of parallelism to be used. Transputers, Connection Machines, farms of workstations, Cellular Neural Networks, Crays, and other hardware paradigms of parallelism are used by the authors of this collection. The papers arise from the areas of parallel knowledge representation, neural modeling, parallel non-monotonic reasoning, search and partitioning, constraint satisfaction, theorem proving, parallel decision trees, parallel programming languages and low-level computer vision. The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history. This volume provides the reader with

a snapshot of the state of the art in Parallel Processing for Artificial Intelligence.

AO Spine Manual, Volume 1: Principles and Techniques; Volume 2: Clinical Applications Jaypee

Brothers Medical Publishers
Authored by three world experts, this is a clinically focused book on pediatric anesthesia. "The Manual", as it is known, has long dominated the market for a succinct and practical resource on administering anesthesia to children and is used by residents, general anesthesiologists, nurse anesthetists, and pediatric anesthesiologists. This new edition retains the basic structure of the book and is updated throughout. Text-heavy in the current edition, the Seventh Edition features the addition of figures to chapters where they are especially helpful (eg, the chapter on cardiovascular surgery and cardiac procedures) and makes greater use of headings to break up the text and guide reading. From reviews of the Sixth Edition: "This is an extremely well written book that I would recommend highly to anyone involved in anaesthetizing children. It is comprehensive enough to provide an excellent reference for trainees and general anaesthetists who occasionally deal with paediatric cases, while at the same time giving valuable supplemental information for paediatric anaesthetists encountering an unusual procedure or condition. In short, this is a book that would make a welcome addition to any anaesthetist's mobile library."
