The malleus, incus, and stapes are attached like a chain to the tympanic membrane and convert sound waves that vibrate the membrane into mechanical vibrations of the three bones. The stapes fills the oval window which is the connection to the inner ear. The inner has two functions; the first is hearing and the second is balance. It is a warren ...

The Bessel function of the second kind then can be thought to naturally appear as the imaginary part of the Hankel functions. The Hankel functions are used to express outward- and inward-propagating cylindrical-wave solutions of the cylindrical wave equation, respectively (or vice versa, depending on the sign convention for the frequency).
