The Encyclopedia of Aerodynamics was written for pilots at all levels from private pilot to airline pilot, military pilots and students of aerodynamics as a complete reference manual to aerodynamic terminology. General aerodynamic text books for pilots are relatively limited in their scope while aerodynamic text books for engineering students involve complex calculus. The references in this book, The Encyclopedia of Aerodynamics, are clearly described and only basic algebra is used in a few references but is completely devoid of any calculus - an advantage to many readers. Over 1400 references are included with alternative terms used where appropriate and cross-referenced throughout. The text is illustrated with 178 photographs and 96 diagrams. The Encyclopedia of Aerodynamics is an ideal aerodynamic reference manual for any pilot's bookshelf.

Range & Endurance - Fuel Efficient Flying in Light Aircraft was written for pilots flying light-single or twin piston-engine aircraft at the Student, Private or Commercial Pilot levels. Using the fuel carried on the aircraft in an efficient manner will not only save money but also increase the aircraft's range (distance flown) or endurance (time remaining airborne). This book, Range & Endurance, discusses various factors in the efficient use of the fuel available, describes fuel technology, light

aircraft fuel systems, refuelling procedures, pre-flight planning in regards to fuel use and in-flight use of fuel to increase the aircraft's range or endurance. The book ends with a final chapter containing fuel calculation formulas for use on the pilot ' s E6-B Air Navigation Computer. Flying for range or endurance is an important part of a pilot ' s airmanship duties; this book Range & Endurance - Fuel Efficient Flying in Light Aircraft offers a good insight to achieve this on every flight.
