For a wide array of problems requiring surgical intervention, this volume examines the anatomy, preoperative evaluation, surgical strategy, details of technique, postoperative management, and anticipated results. The management of operative complications and injuries to bowel, urinary system, and pelvic vessels is discussed. This volume is divided into three sections: ambulatory, vaginal, and abdominal surgery. The ambulatory section will be particularly useful to the family physician. The abdominal section explains complication management for the gynecologist whose surgical background may not include gastrointestinal or urinary tract surgery. The section on ovarian surgery contains additional data for the general surgeon who may encounter unexpected ovarian lesions. Although the book should be most useful to

gynecologic residents-in-training and practicing gynecologists, it will also be of use to general surgeons who perform gynecologic operations and to all physicians who perform ambulatory gynecologic procedures. The operative techniques depicted are currently used procedures based on the newer concepts of wound healing and suturing, utilizing modern surgical instrumentation. When several techniques are available, the author's personal preference is described. This book, which was produced by the project manager system, represents the efforts of 21 persons in three cities. Christine G. Williamson managed the project with drive, understanding, and skill. This is why this reference, resolutely didactic and practical, was written with the ambition to become a handbook of reference for the proven techniques of vaginal surgery.

The management of soft-tissue neoplasms has always had an aura of mystique due to the relative rarity of these lesions in comparison to the more common cancers occurring in man. There are many variations in technique of the operations employed for these tumors as well. In this volume we have illustrated our own personal preferences in approach to soft tissue sarcomas with the hope it will serve as a useful guide to the surgeon who is faced with one or more of these problems. None of the operations depicted in this manual are original with us but they are procedures and approaches we have found effective for the clinical management of this family of tumors. In presenting this volume we wish to acknowledge our gratitude to our surgical teachers, our present and past associates in surgical oncology, our colleagues in the other oncologic disciplines, and our patients whose treatment is illustrated herein. We are indebted to Dr. Saul Kay, Professor of Pathology, and Dr. James Walsh, Associate Professor of Radiology, for providing the illustrations of histopathology and radiologic imaging in the early chapters. We particularly appreciate the superb artwork of our enthusiastic teammates, Trudy Nicholson and Jane Hurd, as their contribution is the crux of our endeavor. Walter Lawrence Jr., M.D. James P.
