The Birth of NASA--The Diary of T. Keith Glennan tells the story of the critical formative months of the new agency. The Introduction describes the background of T. Keith Glennan, the first NASA Administrator. After the Introduction, the book continues with Glennan's recollections of NASA

from his appointment until the end of 1959. The 13 chapters are written in a diary format covering month-by-months his activities until he left the position in 1961. A Postscript, written in 1963, gives his views on the space program after he left office. A Biographical Appendix gives short sketches of about 400 individuals active in the space program during this period. Throughout the diary numerous explanatory footnotes by the editor clarify events and provide references for further details. Although Glennan's stay at NASA was short, his contributions are most significant, as he built the organization that would send men to the moon and serve the nation to the present time.

An expert communicator, Jack McAfghan writes the memoirs of his four-legged life as a mixed-breed Afghan Hound. From obedience and agility training to hospice work, Jack and his master learn their lessons side by side, inevitably applying what they have learned as their own lives unfold. It is a love story that can be used as an informal study guide for those who are in the process of training a dog, learning to love, or grieving over the loss of a friend. Jack presents with a wise, open and informed mind. He speaks firsthand about the psychological aspects of canine behavior as he opens the reader's mind to the possibilities that exist in life and after death. He reminds us that the way we think can change the course of our lives. This story will touch everyone who has ever loved. It matters not if they have four legs or two. Jack leads us to a higher love as he expands our tolerance and compassion for all of

humanity. He extends himself to every creature of the earth, every human on the planet, every spirit in the universe and most of all, to the bona fide Master over all.

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key

FeaturesA go-to guide to help you master AI algorithms and concepts8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillanceUse TensorFlow, Keras, and other Python libraries to implement smart AI applicationsBook Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will

implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learnBuild an intelligent machine translation system using seq-2-seq neural translation machinesCreate AI applications using GAN and deploy smart mobile apps using TensorFlowTranslate videos into text using CNN and RNNImplement smart AI Chatbots, and integrate and extend them in several domainsCreate smart reinforcement, learning-based applications using Q-LearningBreak and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want

to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

Dementia and Alzhiemers coloring in book In recent years, the health benefits of coloring have

been explored and studied. Seniors, especially those with dementia and alzhiemers, greatly benefit from neurological stimulation, and coloring in is one of the ways to achieve this much needed brain exercise. The benefits found throughout numerous studies may include: Reduction of stress and anxiety Improved motor skills and vision Improved sleep and focus Decision making skills It is important to note however, that different activities will work and be favoured by those with dementia differently - that is - some may love coloring, while others may hate it. This coloring book has been developed specifically for individuals with Dementia and Alzheimers, as well as any other seniors looking for a coloring in activity book. How does this book differ from other coloring books: This book only contains simple shapes and patterns. Rather than being specific objects or animals etc, this book contains shapes and patterns that encourage decision making - How can I make this page look good? Use of thick lines, making it easier for seniors to 'stay in the lines' Each page is repeated twice. For those who use the book in order, carers and family members will be able to track progress (I.e Coloring in may be messy to begin with, but improve throughout the book indicating improvement in cognitive function. Conversely, coloring in may be clean to begin with, and slowly get less coherent, indicating a decline in your loved ones health and indicating the need for greater assistance and care levels) It is recommended that a schedule is developed with these activities, to provide further structure to your

loved one or patient. This may include a certain goal to meet (E.g. 1 Page per day) or an allocated time slot to color in. Consistency is key to improvement. Book Features: 60 Coloring in pages (30 designs repeated twice) Single sided print, allowing for use of texta and ink pen and preventing bleed through White paper Perfect bound book Softcover 8.5 x 11 inch

Interpreting Our Heritage

Riley Blakely and the remainder of Grandview High's french class is heading out on a school trip to Paris. The three weeks in Paris are supposed to be an 'educational opportunity' for this lot. But of course, these hormonal teenagers just cannot abide by the rules. The one rule set by their lovely Mr. Walker: You cannot room with somebody of the opposite gender. So what does this french class do? Room with the opposite gender, with a funny way of picking roommates. Chit picking. Because hormonal teenagers can just never get enough. Insert Asher West. Her not so secret annoying hater. It's a hate-hate relationship. He's the guy who picked Riley's name. He's the most popular guy in the freaking school and Riley? Not so much. Put the two together and you'll get a whole lot of arguments and awkward moments. They're roommates and they're stuck in Paris, the city of love and the city of lights

Molecular bioinformatics as a newly emerging

interdisciplinary research area, comprises the development and application of algorithms for the purpose of analysis, interpretation and prediction of data and for the design of experiments in the biosciences. The heterogeneous collection of original research presented in this volume illustrates the use of the wide and diverse range of algorithmic techniques. The application of algorithms from computer sciences, including artificial intelligence, machine learning, genetic programming, evolutionary algorithms and neural nets to molecular biology especially DNA and RNA sequence analysis and protein engineering is broadly examined. Both algorithmic and biological background problems are explained for the benefit of an interdisciplinary audience.

This is a survey of cult religious violence as associated with Jonestown, the Branch Davidians, Aum Shinriko, Montana Freeman, Solar Temple, Heaven's Gate and Chen Tao. The book presents case studies of contemporary millennial religions that either became violent, or had the potential for becoming violent. It sets out to reveal how outside pressures and internal forces affect the decision to use violence by new religious movements.
