365 Sports Cars You Must Drive puts you in the driver's seat of a century's worth of sports car legends (and a few rather less legendary), each presented with a fun and informative profile and fact-and-spec box. It's the ultimate gearhead's bucket list and poses the challenge: How many have you driven? Whoever coined the phrase "getting there is half the fun" must have owned a sports car. And the wag who suggested that "it's the journey not the destination"? Probably driving a Lotus or MG at the time. From towering icons like Ferrari, Lamborghini, Porsche, and Corvette to everyman sportsters from Triumph, MG, Sunbeam, and Miata to oddballs like Crosley, Sabra, and DB, sports cars inspire passion and strong opinions as few other vehicles on the road can. In one beautiful book, long-time Road & Truck? magazine chief photographer John Lamm, along with other top motoring contributors, gives the reader illustrated profiles of every sports car you've ever dreamed of driving! Now, imagine if you could drive a different sports car—any sports car—every single day for a year. Which would you choose?

Nature Oxford University Press on Demand

Introduces thirteen cars produced in the United States in the 1990s and early 2000s, including the Lincoln Town Car, the AM General Hummer, and the Dodge Viper.

The Chevrolet Corvette; the Dodge Coronet; the Ford GT they're names that send a shiver down the spine of true car enthusiasts. With big V8 engines crammed into mid-sized shells, they ripped up the roads on their way out of Detroit as they roared onto the market and into the awaiting arms of the power-hungry public. Readers discover which is the most powerful muscle car ever made and what nearly led to their extinction in the '70s, as well as learning which of their 21st century descendants should be purchased today. Readers discover all this and more with beautifully laid-out, detailed profiles of the best muscle cars their facts, stats, and great stories from behind the scenes.

U.S. Navy Diving Manual The Rosen Publishing Group, Inc Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Black Enterprise Vehicle Market Research International

The Viper stunned Americans by showing that Dodge, whose cars were all front-wheel drive (and mostly powered by four-cylinder engines), could make a raw, brutal, V10-powered car that could run with the best. Team Viper went a step further at Le Mans, proving that an American car could handle turns, too; so well that it won its class, repeatedly, at a fraction of the cost of the cars it beat. This book covers the transition from a concept to a rough and brutal rocket to a world-class supercar, and includes every generation. The story also tells of the rough times when the entire Viper business could have been sold to the highest bidder, and considers alternative paths the 2013-17 Viper might have taken. This is not just a gushing tribute to the Dodge Viper, the author provides an objective view of the full story, using business, historical, and enthusiast perspectives. The book looks at the business case for each generation, the development stories and their outcomes, and describes some of the issues owners may have to watch out for, particularly in the early models.

Fish4Knowledge: Collecting and Analyzing Massive Coral Reef Fish Video Data Publications International Limited

A visual history of the Camaro traces Chevrolet's efforts to capture the 1960s youth market and compete with the Mustang, describing classic models including the IROC-Z while assessing the Camaro's influence on car design and culture. Original.

Black Enterprise Springer

The Viper on the Hearth is the first full-length study to look at representations of Mormonism in popular fiction, enhancing our understanding of the religion's vexed relationship to American society. The book reconsiders the nature of Mormonism's encounter with mainstream religion, and asks how a category like "heresy" can operate in a pluralistic society. Examining the ways

in which Mormons have been portrayed in popular culture, Givens's study demonstrates how fiction can respond to cultural conflicts and anxieties by refashioning heresy into a more appropriate target for moral and political crusades.

This book gives a start-to-finish overview of the whole Fish4Knowledge project, in 18 short chapters, each describing one aspect of the project.

The Fish4Knowledge project explored the possibilities of big video data, in this case from undersea video. Recording and analyzing 90 thousand hours of video from ten camera locations, the project gives a 3 year view of fish abundance in several tropical coral reefs off the coast of Taiwan. The research system built a remote recording network, over 100 Tb of storage, supercomputer processing, video target detection and tracking, fish species recognition and analysis, a large SQL database to record the results and an efficient retrieval mechanism.

Novel user interface mechanisms were developed to provide easy access for marine ecologists, who wanted to explore the dataset. The book is a useful resource for system builders, as it gives an overview of the many new methods that were created to build the Fish4Knowledge system in a manner that also allows readers to see how all the components fit together.

The International Symposium on Distributed Computing and Artificial Intelligence (DCAI 10) is an annual forum that brings together past experience, current work and promising future trends associated with distributed computing, artificial intelligence and their application to provide efficient solutions to real problems. This symposium is organized by the Biomedicine, Intelligent System and Educational Technology Research Group (<http://bisite.usal.es/>) of the University of Salamanca. The present edition has been held at the Polytechnic University of Valencia, from 7 to 10 September 2010, within the Congreso Español de Informática (CEDI 2010). Technology transfer in this field is still a challenge, with a large gap between academic research and industrial products. This edition of DCAI aims at contributing to reduce this gap, with a stimulating and productive forum where these communities can work towards future cooperation with social and economic benefits. This conference is the forum in which to present application of innovative techniques to complex problems. Artificial intelligence is changing our society. Its application in distributed environments, such as internet, electronic commerce, environment monitoring, mobile communications, wireless devices, distributed computing, to cite some, is continuously increasing, becoming an element of high added value with social and economic potential, both industry, life quality and research. These technologies are changing constantly as a result of the large research and technical effort being undertaken in universities, companies.
