Property, Place and Piracy BoD – Books on Demand

What does it mean to be a social being in the ordinary life-world? This clear and compelling introduction to social phenomenology examines the experiential features of the basic things comprising our life-world, namely me, you, abstract others (enemies, communities, and associations), and attributes of the lived-body (emotions, pain, and pleasure). Each of these entities is phenomenologically described, with the aim of reducing reports of personal experiences and other primary documents to the presumed prototypical experience of the thing in question—its ideal essence. Another aim of this study is to sociologically account for how the various entities of the life-world have been accomplished, that is, how the prototypical experiences of the things in question have come to be. By showing the life-world to be our joint project rather than a fixed, unalterable coherency, this volume destabilizes our naive attitude towards the things of the world. Examples are drawn from the author's own research on issues such as violence, religion, health, and race; from classic and contemporary anthropological research; and from the works of some of the most innovative philosophers of the twentieth century. This study actually does phenomenology instead of merely arguing for its necessity and will appeal to both social scientists and philosophers.

The Great Realization AFB Press

He was known simply as the Blind Traveler -- a solitary, sightless adventurer who, astonishingly, fought the slave trade in Africa, survived a frozen captivity in Siberia, hunted rogue elephants in Ceylon, and helped chart the Australian outback. James Holman (1786-1857) became "one of the greatest wonders of the world he so sagaciously explored," triumphing not only over blindness but crippling pain, poverty, and the interference of well-meaning authorities (his greatest feat, a circumnavigation of the globe, had to be launched in secret). Once a celebrity, a bestselling author, and an inspiration

to Charles Darwin and Sir Richard Francis Burton, the charismatic, witty Holman outlived his fame, dying in an obscurity that has endured -- until now. A Sense of the World is a spellbinding and moving rediscovery of one of history's most epic lives. Drawing on meticulous research, Jason Roberts ushers us into the Blind Traveler's uniquely vivid sensory realm, then sweeps us away on an extraordinary journey across the known world during the Age of Exploration. Rich with suspense, humor, international intrigue, and unforgettable characters, this is a story to awaken our own senses of awe and wonder.

Selected by Today as a book "to ease kids' anxiety about coronavirus." We all need hope. Humans have an extraordinary capacity to battle through adversity, but only if they have something to cling onto: a belief or hope that maybe, one day, things will be better. This idea sparked The Great Realization. Sharing the truths we may find hard to tell but also celebrating the things—from simple acts of kindness and finding joy in everyday activities, to the creativity within us all—that have brought us together during lockdown, it gives us hope in this time of global crisis. Written for his younger brother and sister in response to the Covid-19 pandemic, Tomos Roberts' s heartfelt poem is as timely as it is timeless. Its message of hope and resilience, of rebirth and renewal, has captured the hearts of children and adults all over the globe—and the glimpse it offers of a fairer, kinder, more sustainable world continues to inspire thousands every day. With Tomos Roberts' s heartfelt poem and beautiful illustrations by award-winning artist Nomoco, The Great Realization is a profound work, at once striking and reassuring, reminding readers young and old that in the face of adversity there are still dreams to be dreamt and kindnesses to be shared and hope. There is still hope. We now call it The Great Realization and, yes, since then there have been many. But that' s the story of how it started . . . and why hindsight' s 2020.

This book takes the concept of piracy as a starting point to discuss the instability of property as a social construction and how this is spatially situated. Piracy is understood as acts and practices that emerge in zones where the construction and definition of property is ambiguous. Media piracy is a frequently used example where file-sharers and copyright holders argue whether culture and information is a common resource

to be freely shared or property to be protected. This book highlights that this is not a dilemma unique to immaterial resources: concepts such as property, ownership and the rights of use are just as diffuse when it comes to spatial resources such as land, water, air or urban space. By structuring the book around this heterogeneous understanding of piracy as an analytical perspective, the editors and contributors advance a trans-disciplinary and multi-theoretical approach to place and property. In doing so, the book moves from theoretical discussions on commons and property to empirical cases concerning access to and appropriation of land, natural and cultural resources. The chapters cover areas such as maritime piracy, the philosophical and legal foundations of property rights, mining and land rights, biopiracy and traditional knowledge, indigenous rights, colonization of space, military expansionism and the enclosure of urban space. This book is essential reading for a variety of disciplines including indigenous studies, cultural studies, geography, political economy, law, environmental studies and all readers concerned with piracy and the ambiguity of property.

This is a book about the intersections of three dimensions. The first is the way social scientists and historians treat the history of psychiatry and healing, especially as it intersects with psychedelics. The second encompasses a reflection on the substances themselves and their effects on bodies. The third addresses traditional healing, as it circles back to our understanding of drugs and psychiatry. The chapters explore how these dimensions are distinct, but deeply intertwined, themes that offer important insights into contemporary healing practices. The intended audience of the volume is large and diverse: neuroscientists, biologists, medical doctors, psychiatrists, psychologists; mental health professionals interested in the therapeutic application of psychedelic substances, or who work with substance abuse, depression, anxiety, and PTSD; patients and practitioners of complementary and alternative medicine; ethnobotanists and ethnopharmacologists; lawyers, criminologists, and other specialists in international law working on matters related to drug policy and human rights, as well as scholars of religious studies, anthropologists, sociologists, and historians; social scientists concerned both with the history of science, medicine, and technology, and concepts of health, illness, and healing. It has a potentially large international audience, especially considering the

increasing interest in "psychedelic science" and the growing spread of the use of traditional psychoactives in the West.

What are the principles that keep our society together? This question is even more difficult to answer than the long-standing question, what are the forces that keep our world together. However, the social challenges of humanity in the 21st century ranging from the financial crises to the impacts of globalization, require us to make fast progress in our understanding of how society works, and how our future can be managed in a resilient and sustainable way. This book can present only a few very first steps towards this ambitious goal. However, based on simple models of social interactions, one can already gain some surprising insights into the social, "macro-level" outcomes and dynamics that is implied by individual, "micro-level" interactions. Depending on the nature of these interactions, they may imply the spontaneous formation of social conventions or the birth of social cooperation, but also their sudden breakdown. This can end in deadly crowd disasters or tragedies of the commons (such as financial crises or environmental destruction). Furthermore, we demonstrate that classical modeling approaches (such as representative agent models) do not provide a sufficient understanding of the self-organization in social systems resulting from individual interactions. The consideration of randomness, spatial or network interdependencies, and nonlinear feedback effects turns out to be crucial to get fundamental insights into how social patterns and dynamics emerge. Given the explanation of sometimes counter-intuitive phenomena resulting from these features and their combination, our evolutionary modeling approach appears to be powerful and insightful. The chapters of this book range from a discussion of the modeling strategy for socio-economic systems over experimental issues up the right way of doing agent-based modeling. We furthermore discuss applications ranging from pedestrian and crowd dynamics over opinion formation, coordination, and cooperation up to conflict, and also address the response to information, issues of systemic risks in society and economics, and new approaches to manage complexity in socio-economic systems. Selected parts of this book had been previously published in peer reviewed journals.

The booming increase of the senior population has become a social phenomenon and a challenge to our societies, and technological advances have undoubtedly contributed to improve the lives of elderly citizens in numerous aspects. In current debates on technology, however, the » human factor « is often largely ignored. The ageing individual is rather seen as a malfunctioning machine whose deficiencies must be diagnosed or as a set of limitations to be overcome by means of technological devices. This volume aims at focusing on the perspective of human beings deriving from the development and use of technology: this change of perspective - taking the human being and not technology first - may help us to become more sensitive to the ambivalences involved in the interaction between humans and technology, as well as to adapt technologies to the people that created the need for its existence, thus contributing to improve the quality of life of senior citizens.

The Things of the World Edward Elgar Publishing

The incredible bestselling book from the author of No Barriers and The Adversity Advantage Erik Weihenmayer was born with retinoscheses, a degenerative eye disorder that would leave him blind by the age of thirteen.

But Erik was determined to rise above this devastating disability and lead a fulfilling and exciting life. In this poignant and inspiring memoir, he shares his struggle to push past the limits imposed on him by his visual impairment-and by a seeing world. He speaks movingly of the role his family played in his battle to break through the barriers of blindness: the mother who prayed for the miracle that would restore her son's sight and the father who encouraged him to strive for that distant mountaintop. And he tells the story of his dream to climb the world's Seven Summits, and how he is turning that dream into astonishing reality (something fewer than a hundred mountaineers have done). From the snow-capped summit of McKinley to the towering peaks of Aconcagua and Kilimanjaro to the ultimate challenge, Mount Everest, this is a story about daring to dream in the face of impossible odds. It is about finding the courage to reach for that ultimate summit, and transforming your life into something truly miraculous. STUDIES IN THE BOOK OF JOSHUA This guide to Victorious Christian Living is not about a theory to be admired but an experience to be enjoyed. The greatest need of the Christian Church is a revival of the New Testament standard of living. There seems to be a wide gulf between what we believe and how we live, a marked contrast between our position in Christ and our actual experience. Too often we claim to believe our Bible from cover to cover, but fail to live out its truths in daily conduct. The spiritual emphasis of the book of Joshua is to move the believer beyond conversion into the land of promise that awaits us here and now. This book is written with the fervent prayer that the Lord may use it for His glory to help many people face afresh the implications of the Cross and the pattern of God's redemption in personal life.

Mobile communications and ubiquitous computing generate large volumes of data. Mining this data can produce useful knowledge, yet individual privacy is at risk. This book investigates the various scientific and technological issues of mobility data, open problems, and roadmap. The editors manage a research project called GeoPKDD, Geographic Privacy-Aware Knowledge Discovery and Delivery, and this book relates their findings in 13 chapters covering all related subjects.

Early Focus IAP

The purpose of this book is to contribute to our understanding of Developmental O and M, independent movement and travel in blind children. Unlike many books and articles on orientation and mobility (O&M) for blind children, this one is not about the effect of blindness on movement. Such an inquiry is self-defeating from the start, as it often begins with misconceptions and deficit-thinking about blindness and the blind child's early motor development. Instead, this book is about the effect of movement on development and the importance of movement experiences for the development of independent movement and travel in blind children. It has a clear premise: blind children must become "active movers" if they are to become independent "travelers."

The essays and lectures collected in this book center around knowledge transfer from the complex-system sciences to applications in business, industry and society, as viewed from a broad perspective. The contributions aim to raise awareness across the spectrum to meet the increasing need to integrate lessons from complexity research into everyday planning, decision making, logistics or optimization procedures and forecasting. The writing has been largely kept non-technical.
