This book shows how Systemic Functional Linguistics may be used to explore and explain the grammar of scientific examination questions. The author outlines the key elements of this theory and identifies problematical structures that affect the linguistic validity of such education assessment questions. This book also shows how examination questions may provide insight into the relationship between teaching and language in science. Do candidates give an incorrect answer because they do not understand the topic or because they do not understand the language by which the question is framed? This book shows how the analysis of scientific examination questions can answer this question. These chapters show how contemporary linguistics can inform the assessment of science and address topics including: the role of images, lexicography, the morphology of sentences, semantic discontinuity and the active reader. An example question is used throughout the text to illustrate the theories and each chapter has its own useful summary, making it a very readable work.

This book explores the ways in which small scale research studies arise from issues of practice, and how they are conceptualised, theorised and implemented using a variety of methodological approaches and frameworks. The narratives written by thirteen doctoral students tell real stories of projects and challenges that researchers face when making the transition from educational practitioner to researcher. Considering case studies from the UK, Sweden and Germany, chapters seek to investigate and inform others about how doctoral students solved individual and typical problems linking practice and research. Each methodological journey highlights and illustrates the iterative and cyclic nature of research, and the normality of the process of going back and forth between data and theory, making changes of direction as research proceeds. The book includes frameworks for combining research, theory and practice, drawing from the methodological decisions and conclusions each contributor made to develop their own practice oriented research. Narratives of Doctoral Studies in Science Education will be key reading for researchers and academics in the fields of educational research, science education, research methods and higher education, as well as masters and doctoral students undertaking their own research projects.
