"A great blueprint for changing your life . . . This book provides food for the body and for the soul." —Pamela A. Popper, PhD, ND, author of Food Over Medicine By combining her decades-long study of both nutrition and scripture, Cyd Notter has created The "Plan A" Diet to serve as a message of hope to those who are nutritionally confused, suffer with declining health, or continually flit from one failed diet plan to another. The book provides a simple, achievable answer for permanent weight loss and improved health, as well as useful insights for dealing with resistance to change. Research confirms that plant-based nutrition is more powerful in restoring health than drugs or surgery, and is proven to be the only diet capable of reversing our number one killer: heart disease. Readers ready to take an active role in their health are equipped with a meal plan, tips for evaluating conflicting information, and an optional transition strategy. Prayer and biblical support has also been included to encourage people of faith. By correlating today's unbiased science with the wisdom of applicable scripture, the book illustrates why God's first prescribed diet for mankind—His "Plan A" Diet—remains the ideal food to this day.

The stakes are high, time is of the essence and every detail matters—yet neonatal pharmacology often has been a challenging and poorly understood area of pediatrics. Until now. Many pharmacists working in hospital pharmacies today have little or no formal training in neonatology yet they are faced with dispensing medications to this fragile NICU population. NICU Primer for Pharmacists, by Amy P. Holmes, is a unique comprehensive overview of pharmacological treatment and neonatal care puts the information pharmacists, students, and residents need in one place, including strategies for: Selecting the optimal drug at the right dose within hours of recognizing a problem Detecting and correcting product dilutions Overseeing dosing adjustments as patients mature, increase or lose body weight Accommodating for multiple concurrent diseases, dramatic growth, organ maturation and damage and more Maximizing survival without serious long-term damage and neurodevelopmental delays. NICU Primer for Pharmacists puts the information you need in one place, so you can feel more confident making medication decisions for your tiniest patients. If your team cares for neonatal patients, consider this guide your invaluable resource for safe and effective drug therapy.

**Transfusion Medicine, Apheresis, and Hemostasis** Disha Publications

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

This book provides a comprehensive and detailed description of the various mechanisms of the CCS-EOR process. Whereas previous texts have primarily focused on carbon capture and storage (CCS) and enhanced oil recovery (EOR) separately, this book provides a general overview of both technologies when used together. Coupled CCS-EOR technology has become increasingly important, as it overcomes the respective shortcomings of the two technologies. The book presents an integrated numerical model including the hysteresis effect, solubility trapping, miscibility, and formation damage by asphaltene deposition. The experimental and model-based evaluation of fluid properties is also discussed. The book concludes by discussing the latest research into CO<sub>2</sub> storage coupled with EOR, most notably performance control by including additives in CO<sub>2</sub> injection, and CO<sub>2</sub> injection into shale reservoirs. Ideally suited for graduate students and researchers in the fields of carbon capture, utilisation, and storage, the book shares essential insights into maximising the efficiency of CCS and EOR alike.

Transfusion Medicine, Apheresis, and Hemostasis: Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts, many whom are national leaders in their respected fields. It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis. The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology (ABP) certification exam in Transfusion Medicine. This book is not intended to be a substitute for textbooks, original research or review articles, and/or clinical training. Further, since the field of medicine, both from a scientific and regulatory perspective, rapidly changes, the readers are advised to continuously update their knowledge by attending national meetings and reading clinical journals. To equip the readers with the basic knowledge in critical reading and data analysis, which is an essential skill in daily medical practice, a novel chapter titled "Data Interpretation in Laboratory Medicine" was included in this book. In this chapter, the readers are asked to make logical conclusions based on the given data and/or statistical results. Moreover, there is also a chapter on "Practical Calculations in Transfusion Medicine, Apheresis, and Hemostasis" to help consolidate all the necessary formulas commonly used in daily practice for easy reference. These chapters are unique to our book and will not be found in any other currently on the market. All of the questions in this book were originally created by the authors of each chapter. Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine, Apheresis, and Hemostasis. These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice. Each question is then followed by 5 possible answers, with only one being correct (or the best answer). After the question, there is a conceptual explanation followed by a more factual explanation of the right and wrong answers. We gave the individual authors the freedom to choose how they explained the wrong answer choices. Some authors chose to be more direct (e.g. Answer A is incorrect because...), while other authors chose a more conversational style (e.g. Human resources (answer A) includes staffing, selection, orientation, training, and competency assessment of employees). This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice. At the end of each chapter, there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field. Another special feature to our textbook is the presence of a pre-test and post-test, which are provided to help the readers with self-assessment. As stated above, the main focus of this book is to help the readers preparing for the

ABP certification exam in Transfusion Medicine. However, due to the interdisciplinary nature of the field of Transfusion Medicine, Apheresis, and Hemostasis, we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion, apheresis, and hemostasis issues, such as hematologists, anesthesiologists, surgeons, and critical care physicians. We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam, when the topics are related to Transfusion Medicine, Apheresis, and Hemostasis.
