induction of drought
resistance and
apomixes and plant
breeding
enhancement

(through molecularly assisted breeding, genetic engineering, genome editing and next generation sequencing). The book concludes with a case study for the improvement of small grain cereals. Readers will gain an understanding of the biotechnological tools and concepts central to sustainable agriculture. *More Food: Road to Survival* is, therefore, an ideal reference for agriculture students and researchers as well as professionals involved in sustainability studies. *Care and Feeding of Your Chi* CRC Press

Helen Hardacre, a leading scholar of religious life in modern Japan, examines the Japanese state's involvement in and manipulation of shinto from the Meiji Restoration to the present. Nowhere else in modern history do we find so pronounced an example of government sponsorship of a religion as in Japan's support of shinto. How did that sponsorship come about and how was it maintained? How was it dismantled after World War II? What attempts are being made today to reconstruct it? In answering these

questions, Hardacre shows why State shinto symbols, such as the Yasukuni Shrine and its prefectural branches, are still the focus for bitter struggles over who will have the right to articulate their significance. Where previous studies have emphasized the state bureaucracy responsible for the administration of shinto, Hardacre goes to the periphery of Japanese society. She demonstrates that leaders and adherents of popular religious movements, independent religious entrepreneurs,

women seeking to raise the prestige of their households, and men with political ambitions all found an association with shinto useful for self-promotion; local-level civil administrations and parish organizations have consistently patronized shinto as a way to raise the prospects of provincial communities. A conduit for access to the prestige of the state, shinto has increased not only the power of the center of society over the periphery but also the power of the periphery over the center.
The Lost Pirate
Cambridge

University Press (evolution) to Emphasizing research findings and basic concepts rather than theories, this book surveys the major areas in the psychology of learning from a consistent behaviorist (i.e., B.F. Skinner) point of view. Explores the continuities between human learning and the learning of other animals. The book organizes the phenomena of learning in a systematic way, moving from Behavior Without Learning

Learning Without Words (basics in nonhuman behavior and learning) to Learning With Words (human learning and memory).

This is a simple, straightforward, direct calculus text. Historical strengths rest in the broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises to reinforce conceptualization of the subject matter. The inclusion of two (new) authors should pique interest in a book that in its heyday was the #1 best-seller. With Olinick's handle on applications (he has written a successful modeling book) and Pence's keen sense of technology (he is a guru on the HP and TI graphing calculators), we feel we have put together an unparalleled team of experts. **Writing on the Wall** Vieweg+Teubner Verlag was the #1 best-seller. How difficult it can be to forgive others or to accept forgiveness or to accept that someone who had offended the community has been reconciled and accepted back into it. For two millennia Christians have pondered the scope of the forgiveness Jesus taught

and lived. They have celebrated practices and rites that have enabled the faithful to forgive, to be forgiven, and to accept that God brings reconciliation even when we find it almost impossible to forgive. This book traces that history to the present, offering a sense not only of how the rites of reconciliation

on matter to Catholics but how our struggles with forgiveness are a real contribution to reconciliation in our world.

For custom car builders today, one of the biggest expenses--and a make-or-break feature of the build--is the paint job. Now, with the expert help of one of the

country's top custom painters, readers can learn to custom paint their own cars, from design to finishing touches. With the attention to detail and keen sense of style that have made her the most sought-after custom painter working today, JoAnn Bortles offers step-by-step instructions for achieving that professional look at home.

Her book provides detailed advice on every step from basecoating to artwork and airbrushing to clearcoating and troubleshooting, with special emphasis on designing and executing elaborate paint schemes such as flames, skulls, murals, and pin striping. Clearly written and amply illustrated, this is the

ultimate how-to authoritative paint guide. Also contains an excellent chapter on realistic flames as featured on the book's cover. Electrical Network Theory Woodhead Publishing "This outstanding treatise is the perfect complement to first-year tort courses and is suitable for use with any tort casebook. Concise and

In this internationa These are

exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architecture s and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the

dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book

introduces compression and internal combustion engines' applications , followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons.

Diffusion,
or the
widespread

adoption of innovations, is a critical yet under-researched topic. There is a wide gap between development and successful adoption of an innovation. Therefore, a better understanding of why and how an innovation is adopted can help develop realistic management and business plans. Most books on this topic use a single-discipline approach to explain the diffusion of innovations. This book adopts a multi-disciplinary and managerial process approach to understanding and promoting the adoption of innovations, based on the latest research and practice. It will be of interest to graduates and researchers in marketing, product development and innovation courses.

Why the Rites of Reconciliation Matter

Principles of Physics is a well-established popular textbook which has been completely revised and updated.

How to Custom Paint Your Car

'Fascinating ... not only a history of graffiti, but also a history

of the 18th century through the lost voices of the people who lived through it.' The Times What if walls could talk? For historian Madeleine Pelling, they can - if you know where to look. A brilliant new cultural history of the long eighteenth century, Writing on the Wall is told through the marks its citizens left behind, bringing into focus lost voices from the highest to the lowest in society. From the centre of London to the islands of the Caribbean, creators may be Pelling goes in lost to search of history, but graffiti, together they tell the real story of Britain's most rebellious and transformative century. **Suzuki Samura i/Sidekick & Geo Tracker Automotive Repair Manual** IT SHOULD HAVE BEEN SIMPLE. GET IN, GET THE GOODS, GET OUT. YET WHAT SHOULD BE SIMPLE ALMOST NEVER WAS... Never Far Away Electric Field Analysis is

both a student-friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric simulation, to show how and surface charge theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as:

simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores
