The Craft and Science of Coffee follows the coffee plant from its origins in East Africa to its current role as a global product that influences millions of lives though sustainable development, economics, and consumer desire. For most, coffee is a beloved beverage. However, for some it is also an object of scientifically study, and for others it is approached as a craft, both building on skills and experience. By combining the research and insights of the scientific community and expertise of the crafts people, this unique book brings readers into a sustained and inclusive conversation, one where academic and industrial thought leaders, coffee farmers, and baristas are quoted, each informing and enriching each other. This unusual approach guides the reader on a journey from coffee farmer to roaster, market analyst to barista, in a style that is both rigorous and experience based, universally relevant and personally engaging. From on-farming processes to consumer benefits, the reader is given a deeper appreciation and understanding of coffee's complexity and is invited to form their own educated opinions on the ever changing situation, including potential routes to further shape the coffee future in a responsible manner. Presents a novel synthesis of coffee research and real-world experience that aids understanding, appreciation, and potential action. Includes contributions from a multitude of experts who address complex subjects with a conversational approach. Provides expert discourse on the coffee value chain, from agricultural and production practices, sustainability, post-harvest processing, and quality aspects to the economic analysis of the consumer value proposition. Engages with the key challenges of future coffee production and potential solutions.

Golden-winged Warblers (*Vermivora chrysoptera*) are migratory songbirds that breed in temperate North America, primarily in the Great Lakes region with remnant populations throughout the Appalachian Mountains, and winter in Central and northern South America. Their breeding range has contracted dramatically in the Appalachian Mountains and many populations have dramatically declined, likely due to habitat loss, competition and interbreeding with Blue-winged Warblers (*Vermivora pinus*), and global climate change.. As a result of population declines in much of the eastern portion of their breeding range, Golden-winged Warblers are listed as endangered or threatened in 10 U.S. states and in Canada and have been petitioned for protection under the U.S.

Endangered Species Act. Published in collaboration with and on behalf of The American Ornithological Society, this volume in the highly-regarded Studies in Avian Biology series compiles extensive, current research on Golden-winged Warblers and summarizes what is known and identifies many remaining unknowns, providing a wealth of peer-reviewed science on which future research and listing decisions can be based.

This volume contains the proceedings of the 18th North American Mine Ventilation Symposium held, on a virtual platform, June 12-17, 2021. This symposium was organized by South Dakota Mines, Rapid City, South Dakota, in collaboration with the Underground Ventilation Committee (UVC) of the Society for Mining, Metallurgy & Exploration (SME). The Mine Ventilation Symposium series has always been a premier forum for ventilation experts, practitioners, educators, students, regulators, and manufacturers from around the world to exchange knowledge, ideas, and opinions. This volume features fifty-seven selected technical papers in a wide range of topics including: auxiliary ventilation, case studies of mine ventilation, computational fluid dynamics applications in mine ventilation, diesel particulate control, electric machinery in mine ventilation, mine cooling and refrigeration, mine dust monitoring and control, mine fans, mine fires and explosion prevention, mine gases, mine heat, mine management and organization of ventilation, mine ventilation and automation, occupational health and safety in mine ventilation, renewable/alternative energy in mine ventilation, ventilation monitoring and measurement, ventilation network analysis and optimization, and ventilation planning and design.

Students and recent graduates of counseling and human services programs will consider The Counselor's Companion an indispensable tool to enhance professional practice, knowledge, and skill. The text is a reference-style resource that provides new counselors with a way to bridge the gap between what they learned in the classroom and the challenges they will meet in their practice. Beginning counselors will find concise answers to common questions that will likely arise in the course of their professional development and a reliable reference "companion" as they embark on their careers in the profession. This volume features contributions from counselor educators and professionals in the field, guided largely by the core-curriculum of the Council for Accreditation of Counseling and Related Program (CACREP). Information is presented in brief form, making the main points of each section concise, clear, visible, and easily accessible. Readers are also introduced to cutting-edge areas of research.

This edited volume addresses a rising concern among natural resource scientists and

management professionals about decline of the many plant and animal species associated with early-successional habitats, especially within the Central Hardwood Region of the USA. These open habitats, with herbaceous, shrub, or young forest cover, are disappearing as abandoned farmland, pastures, and cleared forest patches return to forest. There are many questions about "why, what, where, and how" to manage for early successional habitats. In this book, expert scientists and experienced land managers synthesize knowledge and original scientific work to address questions on such topics as wildlife, water, carbon sequestration, natural versus managed disturbance, future scenarios, and sustainable creation and management of early successional habitat in a landscape context.

This book presents various computer-aided drug discovery methods for the design and development of ligand and structure-based drug molecules. A wide variety of computational approaches are now being used in various stages of drug discovery and development, as well as in clinical studies. Yet, despite the rapid advances in computer software and hardware, combined with the exponential growth in the available biological information, there are many challenges that still need to be addressed, as this book shows. In turn, it shares valuable insights into receptor-ligand interactions in connection with various biological functions and human diseases. The book discusses a wide range of phylogenetic methods and highlights the applications of Molecular Dynamics Simulation in the drug discovery process. It also explores the application of quantum mechanics in order to provide better accuracy when calculating protein-ligand binding interactions and predicting binding affinities. In closing, the book provides illustrative descriptions of major challenges associated with computer-aided drug discovery for the development of therapeutic drugs. Given its scope, it offers a valuable asset for life sciences researchers, medicinal chemists and bioinformaticians looking for the latest information on computer-aided methodologies for drug development, together with their applications in drug discovery.

Modern Psychopathologies is addressed to students and mental health professionals who want to sort through contemporary secular understandings of psychopathology in relation to a Christian worldview. Written by well-known and respected scholars, this book provides an introduction to a set of disorders along with overviews of current research on etiology, treatment and prevention. Prior chapters explore the classification of disorders in historic pastoral care and contemporary mental health care. The authors explain the biological and sociocultural foundations of mental illness, and reflect on the relation between psychopathology and the Christian understanding of sin. Modern Psychopathologies is a unique and valuable resource for Christians studying psychology and counseling or providing counseling services, pastoral care, Christian healing ministries or spiritual direction. The revised second edition is fully updated according to DSM-5 and ICD-10. The authors have expanded the analysis to include problems associated with trauma, gender, addiction and more. Though fully capable of standing on its own, the book is a useful companion volume to Modern Psychotherapies by Stanton L. Jones and Richard E. Butman. Christian Association for Psychological Studies (CAPS) Books explore how Christianity relates to mental health and behavioral sciences including psychology, counseling, social work, and marriage and family therapy in order to equip Christian clinicians to support the well-being of their clients.

A supplemental textbook for middle and high school students, Hoosiers and the American Story provides intimate views of individuals and places in Indiana set within themes from American history. During the frontier days when Americans battled with and exiled native peoples from the East, Indiana was on the leading edge of America's westward expansion. As waves of immigrants swept across the Appalachians and eastern waterways, Indiana became established as both a crossroads and as a vital part of Middle America. Indiana's stories illuminate the history of American agriculture, wars, industrialization, ethnic conflicts, technological improvements, political battles, transportation networks, economic shifts, social welfare initiatives, and more. In so doing, they elucidate large national issues so that students can relate personally to the ideas and events that comprise American history. At the same time, the stories shed light on what it means to be a Hoosier, today and in the past.

This book reconceives virtue epistemology in light of the conviction that we are essentially social creatures. Virtue is normally thought of as something that allows individuals to accomplish things on their own. Although contemporary ethics is increasingly making room for an inherently social dimension in moral agency, intellectual virtues continue to be seen in terms of the computing potential of a brain taken by itself. Thinking in these terms, however, seriously misconstrues the way in which our individual flourishing hinges on our collective flourishing. Green's account of virtue epistemology is based on the extended credit view, which conceives of knowledge as an achievement and broadens that focus to include team achievements in addition to individual ones. He argues that this view does a better job than alternatives of

answering the many conceptual and empirical challenges for virtue epistemology that have been based on cases of testimony. The view also allows for a nuanced interaction with situationist psychology, dual processing models in cognitive science, and the extended mind literature in philosophy of mind. This framework provides a useful conceptual bridge between individual and group epistemology, and it has novel applications to the epistemology of disagreement, prejudice, and authority.
