displays, and OLED displays. Luminescent Materials and Applications describes a wide range of materials and applications that are of current interest including organic light emitting materials and devices, inorganic light emitting diode materials and devices, down-conversion materials, nanomaterials, and powder and thin-film electroluminescent phosphor materials and devices. In addition, both the physics and the materials aspects of the field of solid-state luminescence are presented. Thus, the book may be used as a reference to gain an understanding of various types and mechanisms of luminescence and of the implementation of luminescence into practical devices. The book is aimed at postgraduate students (physicists, electrical engineers, chemical engineers, materials scientists, and engineers) and researchers in industry, for example, at lighting and display companies and academia involved in studying conduction in solids and electronic materials. It will also provide an excellent starting point for all scientists interested in luminescent

Luminescence, for example, as fluorescence, bioluminescence, and phosphorescence, can result from chemical changes, electrical energy, subatomic motions, reactions in crystals, or stimulation of an atomic system. This subject continues to have a major technological role for humankind in the form of applications such as organic and inorganic light emitters for flat panel and flexible displays such as plasma displays, LCD

materials. Finally it is hoped that this book will not only educate, but also stimulate further progress in this rapidly evolving field.

Multi-cultural, multi-historical, and spanning man's faith across time, *The Final Book* is a controversial and blasphemous last chapter of humanity. In the beginning there was love. The Goddess of Life in an elated romance with a beloved mortal. Her sister killed him. Their combined actions ripping a hole in destiny and plaguing mankind with an age of unprecedented corruption, vicious holy wars, and religious absolutism. Though long forgotten by the mortals they serve, Zeus and his Pantheon continue to foster and protect mankind which is tearing itself apart—but even God isn't infallible. After failed diplomacy, the King of the Gods is left with no choice but to take the persona of a modern man—the famed genetic scientist Dr. Hork. In an effort to preserve the future by reshaping the past, Dr. Hork uses Project Genesis—the transfer of consciousness—to send subjects back in time. However, not without devastating failures. Subjects of the experiment wreak havoc upon humanity until a familiar character is reborn to correct the course. Reincarnated and ready to fulfill his true destiny, Joshua Bach is the catalyst the Gods have been waiting for—and Dr. Hork's final beacon of salvation. Ferociously idealistic, the free-spirited young man struggles to come-of-age in a time and society ruled by money and corruption. Under the wing of the Gods, Josh rediscovers his purpose, along with a love that can only be considered timeless. Set in three periods—modern day, the 1960s, and ancient

Mesopotamia—this epic blends human history, ruthless mythology, science fiction, and the supernatural to tell a love story of the future.

Martin L. Gross digs far beneath the waste of tax money by the government to uncover the startling, but undeniable truth: The core of government is rotten, and we are being strangled by -- tax laws that destroy the middle class -- the two-party dictatorship -- power-made Washington -- a bloated and indifferent Congress, and more.

Scathingly honest and crammed with investigative reporting, no thoughtful, concerned American will want to ignore its warnings.

Kate Orff, 2017 MacArthur Fellow, has an optimistic and transformative message about our world: we can bring together social and ecological systems to sustainably remake our cities and landscapes. Part monograph, part manual, part manifesto, *Toward an Urban Ecology* reconceives urban landscape design as a form of activism, demonstrating how to move beyond familiar and increasingly outmoded ways of thinking about environmental, urban, and social issues as separate domains; and advocating for the synthesis of practice to create a truly urban ecology. In purely practical terms, SCAPE has already generated numerous tools and techniques that designers, policy makers, and communities can use to address some of the most pressing issues of our time, including the loss of biodiversity, the loss of social cohesion, and ecological degradation. *Toward an Urban Ecology* features numerous projects and select research from SCAPE, and conveys a range of strategies to engender a more resilient and inclusive built environment.

Selecting the right technology is one of the most critical decisions in technology driven enterprises, and no selection is complete without a thorough and informed evaluation. This book explores the digital transformation movement from three perspectives: the technological, the personal, and the organizational. The technical perspective analyses and evaluates new and up and coming technologies such as IoT and Cloud Technology. The personal perspective focuses on the consumer's attitude and experience in the adoption of technologies such as smart homes, smart watches, drones and wireless devices. And the organizational perspective focuses on evaluating how technology-driven an organization and their core activities or products are. This book is an ideal reference for managers who

are responsible for digital transformation in their organizations and also serves a good starting point for researchers interested in understanding the trend. The book contains case studies that may be used by educators in MBA and Engineering and Technology Management MS programs covering digital transformation related courses.
