Highlighting how the environment and society are intrinsically linked, this book argues that environmental concerns need to be treated as a core concept in the study of sociology. Given its focus on inequality and the constituent elements of the social world, sociology has often been accused of negligence regarding the urgency of the world's environmental crisis. Sociology Saves the Planet corrects this mis-perception by integrating the theme of environment and society to highlight the intrinsic value a sociological perspective brings to our understanding of the current ecological crisis. The author first draws out the origins of sociology in the social and ecological transformations of the industrial revolution. In accounting for the social upheavals of the 19th century, Emile Durkheim, Karl Marx, and Max Weber all provided key insights into the changing nature of human organization and exploitation of the natural world. Second, readers will explore sociological perspectives developed since that time, grounded in evidence-based research, which highlight the inextricable connection between environment and society. Special attention is devoted to the dual role of people as producers and consumers in the modern context. Lastly, this book examines the significance of major categories of social difference regarding the current environmental crisis. In that regard the question of environmental justice is paramount, illuminating both the disproportionate benefit of natural resource exploitation to those countries and individuals with higher socioeconomic status, and the greater exposure to environmental hazard among those with less. Averting global calamity requires we recognize the unequal social impacts of the environmental crisis while valorizing inclusivity and the diversity of human experience in our search for solutions.

Designed for introductory courses, this book is essential reading for sociology students and will be of interest to students and academics studying environment and sustainability more broadly.

This book explains how and why information literacy can help to foster critical thinking and discerning attitudes, enabling citizens to play an informed role in society and its democratic processes. In early 21st century societies, individuals and organisations are deluged with information, particularly online information. Much of this is useful, valuable or enriching. But a lot of it is of dubious quality and provenance, if not downright dangerous. Misinformation forms part of the mix. The ability to get the most out of the information flow, finding, interpreting and using it, and particularly developing a critical mindset towards it, requires skills, know-how, judgement and confidence – such is the premise of information literacy. This is true for many aspects of human endeavour, including education, work, health and self-enrichment. It is notably true also for acquiring an understanding of the wider world, for reaching informed views, for recognising bias and misinformation, and thereby for playing a part as active citizens, in democratic life and society. This ground-breaking and uniquely multi-disciplinary book explores how information literacy can contribute to fostering attitudes, habits and practices that underpin an informed citizenry. The 13 chapters each come from a particular perspective and are authored by international experts representing a range of disciplines: information literacy itself, but also political science, pedagogy, information science, psychology. Informed Societies: Why Information literacy matters for citizenship, participation and democracy covers: - why information literacy and informed citizens matter for healthy, democratic societies - information literacy ’ s relationship with political science - information literacy ’ s relationship with human rights - how information literacy can help foster citizenship, participation, empowerment and civic engagement in different contexts: school students, refugees, older people and in wider society - information literacy as a means to counter misinformation and fake news - the challenges of addressing information literacy as part of national public policy. The book will be essential reading for librarians and information professionals working in public libraries, schools, higher education institutions and public bodies; knowledge and information managers in all sectors and student of library and information science students, especially those at postgraduate/ Masters level who are planning dissertations. Because of the topicality and political urgency of the issues covered, the book will also be of interest to students of political science, psychology, education and media studies/journalism; policy-makers in the public, commercial and not-for-profit sectors and politicians implications of information use and information/digital literacy.

How often do we hear that Americans are so ignorant about politics that their civic competence is impaired, and that the media are to blame because they do a dismal job of informing the public? Processing Politics shows that average Americans are far smarter than the critics believe. Integrating a broad range of current research on how people learn (from political science, social psychology, communication, physiology, and artificial intelligence), Doris Graber shows that televised presentations—at their best—actually excel at transmitting information and facilitating learning. She critiques current political offerings in terms of their compatibility with our learning capacities and interests, and she considers the obstacles, both economic and political, that affect the content we receive on the air, on cable, or on the Internet. More and more people rely on information from television and the Internet to make important decisions. Processing Politics offers a sound, well-researched defense of these remarkably versatile media, and challenges us to make them work for us in our democracy.

With this second edition, Kraus continues his examination of formal presidential debates, considering the experience of television in presidential elections, reviewing what has been learned about televised debates, and evaluating that knowledge in the context of the election process, specifically, and the political process, generally. He also examines the media and the role they occupy in presidential elections. Because critics often refer to the Lincoln-Douglas debates when reproaching presidential debates, comparisons of the two are discussed throughout the book. Much of the data and information for this accounting of televised presidential debates comes from the author's first-hand experience as one who was involved with these debates as a participant observer, on site at nearly all of the debates discussed. Throughout these discussions, emphasis is placed on the implications for public policy. To suggest policy that will be accepted and adopted by politicians and the public is, at best, difficult. Proposals for changes in public policy based on experience -- even when scientific data support those changes -- must be subjected to an assessment of the values and predispositions of the proponent. These values and predispositions, however, may not necessarily inhibit the proponent's objectivity. As such, this review of television use in the presidential election process provides the context for examining televised debates.

John Harr, who served as a staff member of the Commission on Foreign Affairs Personnel in 1962 and as Director of the Office of Management Planning in the State Department for four years, describes the changes and the response of the Foreign Service Corps to them. He provides a direct approach to the understanding of the professional diplomat and of the pervasive force of professionalism in modern American society. He also outlines managerial strategy to meet the growth challenge of the future. Originally published in 1969.
