Another hilarious offering from bestselling author Cate Kendall. From the backwaters of Tasmania to the sophisticated streets of Sydney, sisters Bellarene and Serandipity have come a long way. As international flight attendants the world is their oyster – until Sera fell in love and settled for family life. Obsessed with keeping up appearances, Sera goes to extreme lengths to maintain the illusion of perfection, while Bella just wants to fly away from the responsibility of mothering her little sister, from the sadness of her broken marriage, and from memories of the past. Gathering her friends at Stitch 'n' Bitch is like therapy. There's a lot of talk, and not much knitting - and they wouldn't have it any other way. Ditzzy Mallory has her own shocks in store, and single mum Chantrea agonises over work and childcare. Widowed single dad, Sam, is terrified of the dating scene, and Sera's uptight neighbour, Jacqueline, has a little secret, one that could destroy her neatly ordered world. Meanwhile Joan, Sera's mother-in-law, watches then all and sniffs with disdain at their trivial worries. Sera wants to be perfect. Bella just wants to be free. Will the sisters get what they want?

This volume consists of 85 chapters that highlight recent advances in our knowledge of the viruses that infect plants and fungi. It begins with general topics in plant virology including movement of viruses in plants, the transmission of plant viruses by vectors, and the development of virus-resistant transgenic plants. The second section presents an overview of the properties of a selection of 20 well-studied plant viruses, 23 plant virus genera and a few larger groups of plant viruses. The third section, which is abundantly illustrated, highlights the most economically important virus diseases of cereals, legumes, vegetable crops, fruit trees and ornamentals. The last section describes the major groups of viruses that infect fungi. The most comprehensive single-volume source providing an overview of virology issues related to plant and fungi Bridges the gap between basic undergraduate texts and specialized reviews Concise and general overviews of important topics within the field will help in preparation of lectures, writing reports, or drafting grant applications

In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.

It has been reported in various business websites, news stations, newspapers and social media that the US unemployment rate went down to 5.5% as of February 2015. Is this good news? Yes, because that means 94.5% of the working population is employed. The bad news is you might be, or might know someone, who is still a part of the remaining 5.5%. Now, with the competition that includes knowledge, experience, personality and determination as the main criteria for judging, you have to prove yourself worthy of a position in that 94.5%. It does not matter if you have been laid off, you resigned or a fresh graduate; what is important is that you want the bosses to know what you are capable of. If you have been looking around and trying for quite some time now but is still not getting that offer, you might

want to revamp your plans. This book aims to help you find and get that job you have always dreamed of. It will guide you through the whole process of job-hunting: from the searching, to preparing your documents, the interview and whatever comes next. These are proven effective ways on how to get a job in 30 days without sacrificing your passion or talent.

This book starts with a concise but rigorous overview of the basic notions of projective geometry, using straightforward and modern language. The goal is not only to establish the notation and terminology used, but also to offer the reader a quick survey of the subject matter. In the second part, the book presents more than 200 solved problems, for many of which several alternative solutions are provided. The level of difficulty of the exercises varies considerably: they range from computations to harder problems of a more theoretical nature, up to some actual complements of the theory. The structure of the text allows the reader to use the solutions of the exercises both to master the basic notions and techniques and to further their knowledge of the subject, thus learning some classical results not covered in the first part of the book. The book addresses the needs of undergraduate and graduate students in the theoretical and applied sciences, and will especially benefit those readers with a solid grasp of elementary Linear Algebra.

Riparian forests along streams and rivers are diverse in species, structure, and regeneration processes, and have important ecological functions in maintaining landscape and biodiversity. This book discusses riparian forests from subpolar to warm-temperate zones, covering headwater streams, braided rivers on alluvial fans, and low-gradient meandering rivers. It presents the dynamics and mechanisms that govern the coexistence of riparian tree species, tree demography, the response to water stress of trees, and the conservation of endangered species, and focuses on natural disturbances, life-history strategies, and the ecophysiology of trees. Because many riparian landscapes have been degraded and are disappearing at an alarming rate, the regeneration of the remaining riparian ecosystems is urgent. With contributions by more than 20 experts in diverse fields, this book offers useful information for the conservation, restoration, and rehabilitation of riparian ecosystems that remain in world streams and rivers.
