In *Evangelist Marketing*, Alex Goldfayn argues that technology companies succeed in spite of

their marketing, not because of it. He says that if consumer tech makers ceased all marketing activity today, they would not see a significant decline in sales. In this book, Alex presents why the current state of overly-technical, features-oriented tech marketing, branding, communications and public relations is costing the industry billions of dollars—easy money that's voluntarily being left on the table. Then he lays out a step-by-step system for creating intensely loyal brand evangelists based on deep consumer insights and simple, emotional language. *Evangelist*

Marketing is written for consumer tech companies big and small—from PC manufacturers to Web-based services. It's also sure to improve the work of their marketing and public relations agencies.

connection with commercial consumers ' interactions. Thanks to machine learning (ML) and cognitive computing technologies, businesses can now analyse vast amounts of data on consumers, generate new knowledge, use it to optimize certain processes, and undertake tasks that were previously impossible. Against this background, this book analyses new algorithmic	practices, discusses their challenges for consumers, and measures such developments against the current EU legislative framework on consumer protection. The book adopts an interdisciplinary approach, building on empirical findings from AI applications in marketing and theoretical insights from marketing studies, and combining them with normative analysis of	privacy and consumer protection in the EU. The content is divided into three parts. The first part analyses the phenomenon of algorithmic marketing practices and reviews the main AI and AI-related technologies used in marketing, e.g. Big data, ML and NLP. The second part describes new commercial practices, including the massive monitoring and

<p>profiling of consumers, the personalization of advertising and offers, the exploitation of psychological and emotional insights, and the use of human-like interfaces to trigger emotional responses. The third part provides a comprehensive analysis of current EU consumer protection laws and policies in the field of commercial practices. It focuses on two main legal</p>	<p>concepts, their shortcomings, and potential refinements: vulnerability, understood as the conceptual benchmark for protecting consumers from unfair algorithmic practices; manipulation, the substantive legal measure for drawing the line between fair and unfair practices. <u>The Home Owner's Manual</u> Rowman & Littlefield A compelling argument that the Internet of</p>	<p>things threatens human rights and security "Sobering and important."--Financial Times, "Best Books of 2020: Technology" The Internet has leapt from human-facing display screens into the material objects all around us. distinction between physical and virtual worlds. Everything is connected. The social and economic benefits are tremendous, but there is a downside: an outage in cyberspace can result not only in loss of communication but also potentially in loss of life. Control of this infrastructure has become a proxy for political power, since countries can easily reach across

borders to disrupt real-world systems. Laura DeNardis argues that the diffusion of the Internet into the physical world radically escalates governance concerns around privacy, discrimination, human safety, democracy, and national security, and she offers new cyber-policy solutions. In her discussion, she makes visible the sinews of power already embedded in our technology

and explores how hidden technical governance arrangements will become the constitution of our future. Algorithmic Marketing and EU Law on Unfair Commercial Practices, Routledge

book explores the contemporary "opting out" trend. It focuses directly on people's intentions and the many reasons why they engage with or reject digital technologies. Author Bonnie Brennen illustrates the nuanced thinking and numerous reasons why people choose to use some new technologies and reject others. Some

interviewees opt out of digital technologies because of their ethical, political, environmental, religious or cultural beliefs. Other people consider new media superficial diversions that do not meet their expectations, needs or interests while some citizens worry about issues of privacy and security and reject digital technologies because of

their fears. Still other people construct their cultural identities through the choices they make about their use of new media. In many cases the use or nonuse of digital technologies offers specific representations of how people assert their independence, authority and agency over new media, while in some cases the choices that people make about new technologies

also illustrate their class position or socioeconomic status. Opting Out of Digital Media responds to the growing trend, addressing the developments in the unplugging phenomenon. It serves as the ideal text for any reader interested in the role of digital technologies in our lives and how it has become a part of a mainstream movement.
