Since its invention in Italy in the fourteenth century, marine insurance has provided merchants with capital protection in times of crisis, thus oiling the gears of trade and commerce. With a focus on customs, laws, and

organisational structures, this book reveals the Italian origins of marine insurance, and tracks the spread of underwriting practices and institutions in Europe and America through the early modern era. With contributions from eleven leading researchers from seven countries, the book examines key institutional developments in the history of marine insurance. The authors discuss its invention in Italy, and its evolution from private to corporate structures, assessing the causes and impacts of various state interventions. Amsterdam and Antwerp are analysed as one-time key centres of underwriting,

as is the emergence and maturity of marine insurance in London. The book evaluates an experiment in corporate underwriting in Cadiz, and the development of insurance institutions in the United States, before applying the metrics of underwriting to discuss commerce raiding in the Atlantic up to the nineteenth century. Modern Real Estate Practice in North Carolina Omaid Nazir "Solidifies Jackson's status as the queen of the modern-day suspense thriller." -- The Providence

Journal Kristi Bentz wants to write true crime. All she needs is that one case that will take her to the top. She finds it when she enrolls at All Saints College after learning that four girls have disappeared in less than two years. "Expect the unexpected." --The Clarion Ledger All four girls were "lost souls"--troubled, vulnerable girls with no one to care about them, no one to come looking

for them if they disappeared. The only person that believes Kristi is her ex-lover, Jay McKnight, a professor on campus. The police think they're runaways, but Kristi senses there's something that links them--something terrifying. . . "Jackson creates relentless suspense. . .builds the tension to an unbearable and satisfying pitch." --Booklist As Kristi

gets deeper into her investigation, she gets the feeling she's being watched and followed--studied, even. Then the bodies start turning up, and Kristi realizes she is playing a game with a killer who has selected her for membership in a special club from which there will be no escaping death. . . "Dark and disturbing." --The Roanoke Times

“ Hollywood Eden brings the lost humanity of the record business vividly back to life ... [Selvin ’ s] style is blunt, unpretentious and brisk; he knows how to move things along entertainingly ... Songs about surfboards and convertibles had turned quaint, but in this book, their coolness is restored. ”
New York Times From surf music to hot-rod records to the sunny

pop of the Beach Boys, Jan & Dean, the Byrds, and the Mama ’ s & the Papa ’ s, Hollywood Eden captures the fresh blossom of a young generation who came together in the epic spring of the 1960s to invent the myth of the California Paradise. Central to the story is a group of sun-kissed teens from the —University High School class of 1959 — a class that included Jan & Dean, Nancy Sinatra,

and future members of the Beach Boys — who came of age in Los Angeles at the dawn of a new golden era when anything seemed possible. These were the people who invented the idea of modern California for the rest of the world. But their own private struggles belied the paradise portrayed in their music. What began as a light-hearted frolic under sunny skies ended up crashing down to earth just a few short

but action-packed years later as, one by one, each met their destinies head-on. A rock 'n' roll opera loaded with violence, deceit, intrigue, low comedy, and high drama, Hollywood Eden tells the story of a group of young artists and musicians who bumped heads, crashed cars, and ultimately flew too close to the sun. It's no secret that in today's complex world, students face unparalleled demands as they prepare for college, careers, and active citizenship. However, those demands won't be met without a fundamental shift from traditional, teacher-centered instruction toward innovative, student-centered teaching and learning. For schools ready to make such a shift, project-

based learning (PBL) offers a proven framework to help students be better equipped to tackle future challenges. Project Based Teachers encourage active questioning, curiosity, and peer learning; create learning environments in which every student has a voice; and have a mastery of content but are also comfortable responding to students' questions by saying, "I don ' t know. Let's find out together." In this book, Suzie Boss

and John Larmer build on the framework for Gold Standard PBL originally presented in Setting the Standard for Project Based Learning and explore the seven practices integral to Project Based Teaching: Build the Culture Design and Plan Align to Standards Manage Activities Assess Student Learning Scaffold Student Learning Engage and Coach For each practice, the authors present a wide range of practical strategies and include

teachers' reflections about and suggestions from their classroom experiences. This book and a related series of free videos provide a detailed look at what's happening in PBL classrooms from the perspective of the Project Based Teacher. Let's find out together. Widespread use of parallel
processing will become a
reality only if the process
of porting applications to
parallel computers can be
largely automated. Usually
it is straightforward for a
user to determine how an
application can be mapped
onto a parallel machine;
however, the actual
development of parallel
code, if done by hand, is
typically difficult and time
consuming. Parallelizing
compilers, which can gen

erate parallel code
automatically, are therefore
a key technology for
parallel processing. In this
book, Ping-Sheng Tseng
describes a parallelizing
compiler for systolic arrays,
called AL. Although
parallelizing compilers are
quite common for shared-
memory parallel machines,
the AL compiler is one of
the first working
parallelizing compilers for
distributed memory
machines, of which systolic
arrays are a special case.
The AL compiler takes
advantage of the fine grain
and high bandwidth
interprocessor

communication capabilities in a systolic architecture to generate efficient parallel code. xii Foreword While capable of handling an important class of applications, AL is not intended to be a general-purpose parallelizing compiler.

Multi-scale Dynamical Processes in Space and Astrophysical Plasmas Magnetized plasmas in the universe exhibit complex dynamical behavior over a huge range of scales. The fundamental mechanisms of energy transport,

redistribution and conversion occur at multiple scales. The driving mechanisms often include energy accumulation, free-energy excited relaxation processes, dissipation and self-organization. The plasma processes associated with energy conversion, transport and self-organization, such as magnetic reconnection, instabilities, linear and nonlinear waves, wave-particle interactions, dynamo processes, turbulence, heating,

diffusion and convection represent fundamental physical effects. They demonstrate similar dynamical behavior in near-Earth space, on the Sun, in the heliosphere and in astrophysical environments. 'Multi-scale Dynamical Processes in Space and Astrophysical Plasmas' presents the proceedings of the International Astrophysics Forum Alpbach 2011. The contributions discuss the latest advances in the exploration of dynamical

behavior in space plasmas environments, including comprehensive approaches to theoretical, experimental and numerical aspects. The book will appeal to researchers and students in the fields of physics, space and astrophysics, solar physics, geophysics and planetary science.
