It provides almost fifty key readings on the field which are grouped around six major topics: * learners * teachers * classrooms * curriculum * assessment * school and education policy. Over half of the readings focus on real life cases - such as pupils, teachers, classrooms or schools - as a means of conveying some of the interpersonal subtleties of teaching and learning in primary schools. At the same time, these cases highlight important current topics and debates in primary education and often provide insights into practical ways of meeting the challenges which are posed. Other articles are more explicitly analytical and provide conceptual frameworks, overviews or critiques of their fields. Management texts to date have emphasized that it is, above methods such as SPC or TQM, a matter of "intangibles" and "culture". This book takes the myth out of management excellence; it can be learned and

practiced. First, manage the three core processes, strategy deployment, product and process development, and the supply chain. And secondly, pay attention to the dimension of management quality, direction setting, integration and delegation, communication, participation, measurement, and employee development. This book explains management quality and demonstrates how it is implemented, with ten plant tours through world-class factories from different industries.
