The typical gasoline marine engine will run fine for

the first 1,000 hours. It is at this juncture that the engine starts to exhibit small problems. If these small problems aren't addressed, they can turn into major problems which may make the last 500 hours of life difficult to reach.

One possible contaminant is air. If air enters the injector pipes, the engine will stop because the air will act as a shock absorber, preventing the fuel pressure from rising high or quickly enough to be sprayed into the cylinder. This is a common problem that is easily solved by bleeding the fuel system of air.

10 Common Boat Engine Problems, Why Do
Boats Break Down ...

The solution is to check the stored fault code
through a diagnostic scanner, identify the cause
of the problem and repair the engine as soon as
possible. Volvo engines are high-performance,
robust and durable. On average they are
reputed to have a life of 300,000 miles without
the need for overhaul or a Volvo engine
replacement, provided the engine is regularly
maintained. Many Volvo owners seek the
advice of Experts in engine maintenance and in
effecting minor engine repair.

Volvo Penta Forum for engine problem solving
and answers

Boat Engine is Sputtering and Losing Power

Your boat feels like it's running out of strength
(and you've ruled out the No. 1 breakdown
reason — running out of fuel). You most likely
have a filter problem or fouled plugs. That

could be why your boat motor is losing power.

Volvo Penta has revamped its entire range
of D4 and D6 diesel engines in a bid to
deliver more power, increased reliability,
improved efficiency and lower running
costs. It has also launched a new Duoprop
sterndrive leg as well as a new engine
management system and redesigned
throttles.
