Porting heads is an  
art and science. It  
takes a craftsman's  
touch to shape the  
surfaces of the  
head for the  
optimal flow  
characteristics and  
the best  
performance.  
Porting demands the  
right tools,  
skills, and  
application of

knowledge. Few other  
engine builders  
have the same level  
of knowledge and  
skill porting  
engine heads as  
David Vizard. All  
the aspects of  
porting stock as  
well as aftermarket  
heads in aluminum  
and cast-iron  
constructions are  
covered. Vizard  
goes into great  
depth and detail on  
porting aftermarket  
heads. Starting  
with the basic  
techniques up to  
more advanced  
techniques, you are  
shown how to port  
iron and aluminum  
heads as well as  
benefits of hand  
and CNC porting.  
You are also shown  
how to build a high-  
quality flow bench  
at home so you can  
test your work and  
obtain professional  
results. Vizard  
shows how to  
optimize flow paths  
through the heads,  
past the valves,  
and into the  
combustion chamber.  
The book covers  
blending the bowls,

a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.
