### Volvo D11 Engine Problems

The problem is with the port motor; an oil analysis with around 300 hours on the oil showed high levels of Aluminum (141ppm), Copper (110), and Chromium (14). The recommendation was made that high levels of Aluminum and Copper indicate turbo bearing wear and the elevated levels of chromium may come from piston ring.

Like all of Volvo's engines, the D11 is built on a foundation of proven, developed architecture that leverages innovative hardware to maximize efficiency. Energy that is normally lost is recovered with standard features including low-friction pistons and a two-speed water pump. A standard hybrid common rail fuel injection system gets the most power out of every drop of fuel.

1. If the spray starting the engine starts and runs, then replace the injectors - give a low dose of fuel on startup. Mostly if the engine is warm started but only if it is cold, will not start without a spray. 2. If the engine starts to spray starting and running just a moment, look for the fault in the fuel system.
