This book addresses one of the
most crucial and common
questions confronting planners of
languages other than English, that
is, how the impacts of global
languages on local languages
should be dealt with:
internationalization or local
language promotion? This
empirical study examines the
implementation of Iran's
governmental language and
terminology policy to accelerate
rarely used abbreviation methods
in Persian in order to preserve the
language from the extensiveness
of borrowed English abbreviated
forms. This book provides an in-
depth analysis of relevant
linguistic theories as well as the
structure and social context of the
Persian language itself, rather
than relying on personal opinions
or beliefs either in favour of or
against abbreviation. The text
appeals to politicians, language
planners, terminologists,
lecturers, authors and translators
of scientific works, especially
those who are speakers of
languages other than English and
seek to promote their local
languages. This book is
particularly relevant to linguistics

students (both undergraduate and
graduate students) and language
teachers and researchers in the
broader areas of language
education and curriculum design.

The Marine Electrical and Electronics Bible CRC Press The utilisation of biomass is increasingly important for low- or zero-carbon power generation. Developments in conventional power plant fuel flexibility allow for both direct biomass combustion and co-firing with fossil fuels, while the integration of advanced technologies facilitates

conversion of a wide range of biomass feedstocks into more readily combustible fuel. Biomass combustion science, technology and engineering reviews the science and technology of biomass combustion, conversion and utilisation. Part one provides an introduction to biomass supply chains and feedstocks, and outlines the principles of biomass combustion for power generation. Chapters also describe the categorisation and preparation of biomass feedstocks for combustion and gasification. Part two goes on to explore biomass combustion and co-firing, including direct combustion of biomass, biomass co-firing and gasification, fast pyrolysis of biomass for the production of liquids and intermediate pyrolysis technologies. Large-scale biomass combustion and biorefineries are then the focus of part three. Following an overview of large-scale biomass combustion plants, key engineering issues and plant operation are discussed, before the book concludes with a chapter looking at the role of biorefineries in increasing the value of the end-products of biomass conversion. With its distinguished editor and international team of expert contributors, Biomass combustion science, technology and engineering provides a clear overview

of this important area for all power plant operators, industrial engineers, biomass researchers, process chemists and academics working in this field. Reviews the science and technology of biomass combustion, conversion and utilisation Provides an introduction to biomass supply chains and feedstocks and outlines the principles of biomass combustion for power generation Describes the categorisation and preparation of biomass feedstocks for combustion and gasification

Developing Countries Have Different Transportation Issues and Requirements Than Developed Countries An efficient transportation system is critical for a

country ' s development. Yet cities in developing countries are typically characterized by high-density urban areas and poor public transport, as well as lack of proper roads, parking facilities, road user discipline, and control of land use, resulting in pollution, congestion, accidents, and a host of other transportation problems. *Public Transport Planning and Management in Developing Countries* examines the status of urban transport in India and other developing countries. It explains the principles of public transport planning and management that are relevant and suitable for developing countries, addresses current transportation system inefficiencies, explores the relationship between mobility and accessibility, and analyzes the results for future use. Considers Socioeconomic and Demographic Characteristics It ' s projected that by 2030, developing nations will have more vehicles than developed nations, and automated guided transit (AGT) and other transport systems will soon be available in India. This text compares five

cities using specific indicators—urbanization, population growth, vehicle ownership, and usage. It determines demographic and economic changes in India, and examines how these changes have impacted transportation demand and supply, transport policy and regulations, and aspects of economics and finance related to public transport. The authors emphasize preserving and improving existing modes, efficient use of the public transport management infrastructure, implementing proper planning measures, and encouraging a shift towards sustainable modes. They also discuss sustainability in terms of environment, energy, economic, and land use perspectives and consider the trends of motorization, vehicle growth, modal share, effects on mobility and environment, and transport energy consumption and emissions. *Public Transport Planning and Management in Developing Countries* addresses the growing resource needs and economics of public transport in developing countries, explains

various aspects of public transport planning and management, and provides readers with a basic understanding of both urban and rural public transport planning and management in developing countries. *Boating* Springer Nature Completely revised and updated, taking the scientific rigor to a whole new level, the second edition of the *Occupational Ergonomics Handbook* is now available in two volumes. This new organization demonstrates the enormous amount of advances that have occurred in the field since the publication of the first edition. The second edition not only provides more information but makes it more accessible. Each volume narrows the focus while broadening the coverage, supplying immediate access to important information. One of the most comprehensive sources for ergonomic knowledge available, written by leading experts, providing both sound theory and practical examples, this book is a valuable resource for anyone in the field. *Fundamental and Assessment Tools for Occupational Ergonomics* merges the frontiers of ergonomics, workplace design, and management issues. The editors have

brought together researchers from disciplines such as biomechanics, anthropometry, and cognitive science with pioneering practitioners in industry. They discuss tools of the trade, upper extremity analysis, backs, interventions, management issues, design for ergonomics, principles of product design, band-aid approaches, processing, distribution centers, and service systems. The handbook is a compendium of information authored by top-flight investigators who represent the cutting edge of opinion, research, and interest in the field.
