The objective of this project is to develop a low emissions natural gas engine. The emission targets for this project are 0.27 g/kW-hr

---

(0.2 g/bhp-hr) of NO<sub>x</sub> and 0.013 g/kW-hr (0.01 g/bhp-hr) of particulate matter. To meet the objective, a chemically correct combustion (stoichiometric) natural gas engine with exhaust gas recirculation (EGR) and a three-way catalyst (TWC) was developed. In addition, a Sturman camless Hydraulic Valve Actuation (HVA) system was used to improve efficiency. A Volvo 11 liter diesel engine was converted to operate as a stoichiometric natural gas engine. Pistons with a 14.3:1 compression ratio were used on this engine. Illustrations. This is a print on demand edition of a hard to find publication.

With the PV444 Volvo broke into the major markets of Europe and the USA thereby establishing the marque outside its home country of Sweden. Full production did not get under way until 1947 and over the next 14 years the PV444 changed gradually, gaining more powerful engines, a larger glass area and a collection of other minor improvements. The 1958 PV544 Volvos were even

better. They retained the basic shape of the PV444, but had new interiors and the option of even more power full engines. 44 articles give full coverage to the PV444, K, L, California, PV544, Sport & Special de Luxe with road and comparison tests, specifications, model introductions, performance data, owners report, touring and a buyers guide. "This manual covers the topics that a factory service manual (designed for factory trained mechanics) and a manufacturer owner's manual (designed more by lawyers than boat owners these days) covers. It will take you through the basics of maintaining and repairing your motor, step-by-step, to help you understand what the factory trained mechanics already know by heart."--Page 1-2.

First released in 2005, Patrick Dyer's popular title has been revised, extended and reformatted for this new

edition. Between 1965 and 1977 the Swedish manufacturer Volvo produced a staggering 40,000 F88 trucks. Along with Scania, Volvo came to dominate the European truck market. Before this revolution trucks were often noisy, uncomfortable and liable to break down. Volvo transformed engines, gearboxes, frames, brakes, drives and shafts, bringing all these components under their own control. This unique position gave them an enviable edge over rivals for quality

control and supply. Development work, too, could proceed without interruption. Wherever trucking work was needed on substantial loads or for long-haul work the F88 was bound to be a serious contender. Patrick Dyer presents the predecessors to the F88, a photographic record of the truck at work in all manner of situations and then deals with the successor F89. His second edition includes all the original photographs as well as 53 new ones - including some rarities - mainly from the Volvo

archives. He has added 7,000 words to the text. Patrick Dyer works in motor sport and also holds a Class 1 HGV licence. In companion books for Old Pond he has covered other iconic machines from Scania, DAF and Ford.
