The human Confederation is on the verge of total defeat. The Trivar rats and the life-draining Antaron have taken turns and now, their cruel overlords, the Scions, have joined the fight. As if the odds weren't bad enough already. The Scions are savage, brutal and arrogant. They have brought with them a weapon beyond comprehension. If the Scions are not stopped, everyone will die. Captain

Becky Keller is flying the refitted ES Devastator. It's the only spaceship with the firepower to match the Scions in a one-on-one. Unfortunately, this enemy doesn't fight fair. Neither does humanity. Not anymore. Deep in the Devastator's hold, Lieutenant Joe Nation and his squad wait to try out the newest piece of untested Space Corps tech. If it works, they'll have a chance to show the Scions exactly what happens when you push too hard. Some people push back. There is one question even victory will not answer. Is this midgame, endgame, or has the fight for survival only just begun? Galaxy Bomb is a high-action science fiction adventure involving massive space battles, overwhelming odds and exciting technologies. It continues the Transcended series and picks up straight after book 3: Far Strike.

Pounder's Marine Diesel Engines and Gas Turbines, Tenth Edition, gives engineering cadets, marine engineers, ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future. This new edition introduces new engine models that will be most commonly installed in ships over the next decade, as well as the latest legislation and pollutant emissions procedures. Since publication of the last edition in 2009, a number of emission control areas (ECAs) have been established by the International Maritime Organization (IMO) in which exhaust emissions are subject to even more stringent controls. In addition, there are now rules that affect new ships and their emission of CO<sub>2</sub> measured as a product of cargo carried. - Provides the latest emission control technologies, such as SCR and water scrubbers - Contains complete updates of legislation and pollutant emission procedures - Includes the latest emission control technologies and expands upon remote

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC

porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.
