In 1956, a prototype of a new passenger car from Volvo was presented. It became known as the Amazon in Sweden and the 121 and 122S in export markets, the latter denoting a more sporty derivative. However, despite its substantial appearance, all Amazons were surprisingly fleet of foot - this was one of the most sporty European saloons of the 1960s. With its elegant, timeless styling the Amazon broke new ground for Volvo - and for passenger cars as a whole. This new book covers the complete story of the Volvo Amazon, from 1956 onwards, including full production histories, comprehensive specification details, and over 250 photographs. The book covers the history of Volvo before and after the Amazon, and development and production of all Amazon derivatives from 1956-1970, including the 121, 122S, 123GT and all of the estate editions. There are biographies of key Volvo personnel, including the company's first designer, Jan Wilsgaard. Also included is the Amazon in motorsport, plus driver biographies: Tom Trana, Sylvia Osterberg and Carl-Magnus Skogh. There is a full buying guide along with tips on tuning and modifying, including rally preparation, and an insight into what the press thought of each Amazon derivative, with pages also devoted to how the car was marketed in period. An ideal resource for owners, or anyone with an interest in the evolution of these classic cars, which is superbly illustrated with 250 colour photographs.

Public transport systems in contemporary Sub-Saharan African cities are heavily reliant upon paratransit services. These services are defined as informal transportation which operates between the public and individual private spheres. In Africa paratransit is characterized by low quality of vehicles and chaotic management but it also provides cheap, accessible and flexible transport solutions for the urban poor. It is typically poorly regulated and operates as a set of informal businesses. A common result of weak public sector regulation and a fare strategy in which owners claim a fixed daily revenue target and drivers who keep the variable balance as income, is destructive competition and poor quality of service. There is an incontrovertible case for improving the quality, reliability and coverage of public transport systems, and some city governments have attempted to do so by initiating reform projects that envisage the phased replacement of paratransit operations with formalised bus rapid transit systems. In this book the authors argue that there are, however, path dependencies and constraints that limit the possible extent of public transport system reform. Paratransit operations also have some inherent advantages with respect to demand responsiveness and service innovation. Attempts to eradicate paratransit may be neither pragmatic nor strategic. Two future scenarios are likely: hybrid systems comprised of both paratransit and formally planned modes; and systems improved by upgrades and strengthened regulation of existing paratransit services. The business strategies and aspirations of incumbent paratransit operators in three case cities - Cape Town, Dar es Salaam and Nairobi - are discussed, as well as their attitudes towards emerging public transport reform projects. International experiences of hybrid system regulation and paratransit business development are reviewed in order to explore policy options. The authors contend that policies recognising paratransit operators, and seeking contextually appropriate complementarity with formalised planned services, will produce greater benefits than policies ignoring their continued existence.

A total departure from previous writing about television, this book is the first ever to advocate that the medium is not reformable. Its problems are inherent in the technology itself and are so dangerous—to personal health and sanity, to the environment, and to democratic processes—that TV ought to be eliminated forever. Weaving personal experiences through meticulous research, the author ranges widely over aspects of television that have rarely been examined and never before joined together, allowing an entirely new, frightening image to emerge. The idea that all technologies are "neutral," benign instruments that can be used well or badly, is thrown open to profound doubt. Speaking of TV reform is, in the words of the author, "as absurd as speaking of the reform of a technology such as guns."

Globalisation and the rapid increase in world trade in the past decade have contributed to greater demand for international transport and logistics and, consequently, the expansion of the maritime industry. The dramatic changes in the mode of world trade and cargo transportation make it more important than ever to have a clear understanding of the way in which freight is transported by sea and the role of ports in this exchange. At the cutting edge in its assessment of the industry, Maritime Logistics covers the whole scope of maritime logistics and examines latest logistical developments within the port and shipping industry. With a range of new international contributors, this new edition has been thoroughly revised and updated. There are new chapters on port centric logistics, hinterland logistics and global supply chains, maritime transport and logistics as a trade facilitator, and future trends and developments. Written by a team of international experts with over fifty years' experience in the field, Maritime Logistics provides a truly global perspective. The book covers everything that students of logistics, as well as those working within the industry, need to know about maritime logistics, including shipping lines, containers, tankers, dry bulk, port-centric logistics, and much more.

Winning Your Election the Wellstone Way S-A Design

This book focuses on the vulnerabilities of state and local services to cyber-threats and suggests possible protective action that might be taken against such threats. Cyber-threats to U.S. critical infrastructure are of growing concern to policymakers, managers and consumers. Information and communications technology (ICT) is ubiquitous and many ICT devices and other components are interdependent; therefore, disruption of one component may have a negative, cascading effect on others. Cyber-attacks might include denial of service, theft or manipulation of data. Damage to critical infrastructure through a cyber-based attack could have a significant impact on the national security, the economy, and the livelihood and safety of many individual citizens. Traditionally cyber security has generally been viewed as being focused on higher level threats such as those against the internet or the Federal government. Little attention has been paid to cyber-security at the state and local level. However, these governmental units play a critical role in providing services to local residents and consequently are highly vulnerable to cyber-threats. The failure of these services, such as waste water collection and water supply, transportation, public safety, utility services, and communication services, would pose a great threat to the public. Featuring contributions from leading experts in the field, this volume is intended for state and local government officials and managers, state and Federal officials, academics, and public policy specialists.

As the 2008 presidential race dominates political discussion and media coverage worldwide, thousands of lesser-known local contests are being hard-fought in our neighborhoods, cities, and states. Winning Your Election the Wellstone Way is based on the work of Wellstone Action, a leading-edge progressive training center that has instructed thousands of political activists, campaign managers, and volunteers, of whom more than two hundred have gone on to run for office and win. Jeff Blodgett and Bill Lofy analyze the crucial lessons learned from many successful (and several losing) campaigns and demystifies what it takes to run fora and win a political seat.

This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

The Geopolitics of the Global Energy Transition U of Minnesota Press

The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the world's main energy-producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry.
