The automotive industry currently faces huge challenges. The fundamental technological paradigm it relies on, volume production, has become progressively more unprofitable in the face of increasingly segmented niche markets. At the same time it faces increasing regulatory and social pressures to improve both the sustainability of its products and methods of production. Building on a wealth of research, *The automotive industry and the environment* addresses those challenges and how they can be met in producing a sustainable and profitable industry for the future. The authors first discuss the development of the automotive industry and the problems it currently faces. They then consider the solutions the industry can adopt. The book reviews trends in more environmentally-friendly technologies such as

the use of more sustainable fuel sources and new types of modular design with built-in recyclability. However, these technologies can only be fully exploited if methods of manufacture change. The book also describes models of decentralised production, particularly the micro factory retailing (MFR) model, which provide an alternative to volume production and promise to be both more sustainable and more profitable. *The automotive industry and the environment* provides both a cogent diagnosis of the environmental and other problems facing the industry and a blueprint for a better future. It will be widely welcomed by the industry, policy makers and all those concerned with sustainable transport. - Addresses the challenges facing the automotive industry, from the increasing unprofitability of volume production to regulatory and social pressures to improve

The automobile sector is one of the most  
archetypal global industries and is seen by  
many as one of the main drivers behind the  
homogenisation of world markets due to firms'  
internationalization strategies and the social  
practices that firms impose. This book argues  
that this is not entirely the case due to the  
heterogeneity of firms and the diversity of  
strategies pursued. It highlights the diversity  
and forms of internationalization and the  
preference for regionalization rather than  
globalization that has occurred over the past  
decade. This book looks specifically at the  
American and Asian car industry.

In Obamanomics, investigative reporter Timothy P. Carney digs up the dirt the mainstream media ignores and the White House wishes you wouldn't see. Rather than "Hope" and "Change," Obama is delivering corporate socialism to America, all while claiming he's battling corporate America. It's corporate welfare, it's regulatory robbery... it's Obamanomics.

latest research from the worldwide mass customization, personalization and co-creation (MCPC) community bringing together new thoughts and results from various disciplines within the field. The chapters are based on papers from The MCPC 2015 Conference where the emphasis was placed on “managing complexity.” MCPC is now beginning to emerge in many industries as a profitable business model. But customization and personalization go far beyond the sheer individualization of products and become an extension of current business models and production styles. This book covers topics such as complexity management of knowledge-based systems in manufacturing design and production, sustainable mass customization, choice navigation, and product modeling. The chapters are contributed by a wide range of specialists, offering cutting-edge research, as well as insightful advances in industrial practice in key areas. The MCPC 2015 Conference had a strong focus on real life MCPC applications, and this proceedings volume reflects this. MCPC strategies aim to profit from the fact that people are different. Their objective is to turn customer heterogeneities into profit opportunities, hence addressing the current trend of long tail business models. Mass customization means to provide goods and services that best serve individual customers’ personal

needs with near mass production efficiency. This book brings together the latest from MCPC thought leaders, entrepreneurs, technology developers, and researchers that use these strategies in practice.
