The objective of this project is to develop a low emissions natural gas engine. The emission targets for this project are 0.27 g/kW-hr (0.2 g/bhp-hr) of NOx and 0.013 g/kW-hr (0.01 g/bhp-hr) of particulate matter. To meet the objective, a chemically correct combustion (stoichiometric) natural gas engine with exhaust gas recirculation (EGR) and a three-way catalyst (TWC) was developed. In addition, a Sturman camless Hydraulic Valve Actuation (HVA) system was used to improve efficiency. A Volvo 11 liter diesel engine was converted to operate as a stoichiometric natural gas engine. Pistons with a 14.3:1 compression ratio were used on this engine. Illustrations. This is a print on demand edition of a hard to find publication.

Situated on one of the world's most beautiful harbors, Stockholm has set the benchmark for civilized urban living since the time of the Vikings. Tony Griffiths reveals a city of power, intrigue, and murder; of scientists and investors; and a sensual city, home of Greta Garbo and the smörgåsbord. Its medieval period saw the Vasa dynasty turn a small town into the capital of a dominant European power and a major trading port. In the Napoleonic era, Stockholm established itself as a center of both technical and social innovation. While the city has suffered more than its fair share of misfortune, Stockholm's cultural and commercial elite transformed it into a community which now welcomes innovation and spreads the fruits of its achievements far beyond its borders.
