A politically polarized  
America is coming together  
over a new kind of car—the  
plug-in hybrid that will save  
drivers money, reduce  
pollution, and increase US  
security by reducing  
dependence on imported oil.  
Plug-in Hybrids points out  
that, where hydrogen fuel-  
cell cars won't be ready for  
decades, the technology for  
plug-in hybrids exists today.  
Unlike conventional hybrid  
cars that can't run without  
gasoline, plug-in hybrids use  
gasoline or cheaper, cleaner,  
domestic electricity—or both.  
Although plug-in hybrids are  
not yet for sale, demand for  
them is widespread, coming  
from characters across the  
political spectrum, such as:

- Chelsea Sexton, the  
automotive insider: working  
for General Motors, Sexton  
fought attempts to destroy  
the all-electric EV1 car and  
describes how car companies  
are resisting plug-in  
hybrids—and why they'll make  
them -anyway.
- Felix Kramer  
and the tech squad: Kramer

started a nonprofit  
organization using the  
Internet to tap into a small  
army of engineers who built  
the first plug-in Prius  
hybrids. • R. James Woolsey,  
former CIA director and  
national security hawk: seeing  
the end of oil supplies  
looming, Woolsey is demanding  
plug-in hybrids to wean us  
from petroleum. Cautioning  
that the oil and auto  
companies know how to  
undermine the success of plug-  
in car programs to protect  
their interests, the book  
gives readers tools to ensure  
that plug-in hybrids get to  
market—and stay here.

Few scholars have been as influential in finance, both as an academic field and an industry, as Eugene Fama. Since writing his groundbreaking 1970 essay on efficient capital markets, Fama has written over 100 papers and books that have been cited hundreds of thousands of times. Yet there is no one collection where one can easily find his best work in all fields. "The Fama Portfolio" will be an outstanding and unprecedented resource in a field that still concentrates mainly on questions stemming from Fama's work: Is the finance industry too large or too small? Why do people continue to pay active managers so much? What accounts for the monstrous amount of trading? Do high-speed traders help or hurt? The ideas, facts, and empirical methods in Fama's work continue to guide these investigations. "The Fama Portfolio" will be a historic and long-lasting collection of some of the finest work ever produced in

What would you do if you discovered your whole life to be a lie? Daniel Henstock thinks he's an ordinary schoolboy but on his sixteenth birthday his world is turned upside down. He is the world's first one-hundred percent genetically-engineered human - assigned the codename Tiberius - and Gregory Dryden, the man responsible, wants him back so that he can continue his deadly experiments. Running for his life, Daniel flees to New York and is forced to go 'off-grid'. In this near-future America, where the security-obsessed authorities require citizens to carry DNA cards, Daniel meets the feisty and beautiful Eleanor. But by falling for her, Daniel also puts her in terrible danger. Daniel pursues the facts about his origins but is hunted by an agent sent by Dryden to bring him to heel. Can Daniel find out the truth whilst trying to evade those who think they own him? As his enemies close in Daniel must draw on resources he never knew he had to win his freedom - but in doing so he may be walking into a deadly trap ...

The "water engine" is an invention unfortunately invented many times. Hydrogen from water is very abundant, renewable and can be used in both energy poor and rich countries. Crude oil and natural gas are limited energy resources. But there are many people who think that certain promising technologies have been suppressed by various political or economic powers, usually with the purpose of protecting their investments and interests and, at the already more absurd extremes of the conspiracy illogical, for sinister motivations of much greater scope. In this new work, the versatile composer and writer Van Jaag, accompanies us on an exciting journey through the history of this unknown invention and its invented inventors.

"In the first decade of this century, for the first time in history, the majority of the planet's population resided in cities. We are an urban planet. If ongoing changes in climate are to have an impact on the human species, most of these impacts will play out in cities. This fact was brought into full relief in the summer of 2003, when more than 70,000 residents of Europe perished in one of the most prolonged and intense heat waves in human history. The final death toll would exceed that associated with any Western European or American conflict since World War II, or any other natural disaster to have ever struck a region of the developed world, and the vast majority of these deaths occurred in cities. Studies in the aftermath of the heat wave would show that not only had global warming increased the likelihood of such an extreme event, but that the intensity of the heat had been greatly enhanced by the physical design of the cities themselves, exposing residents of cities to a much greater risk of illness or death than others. This book is the first to explore the dramatic amplification of global warming underway in cities and the range of actions that can be taken to slow the pace of warming. A core thesis of the book is that the principal strategy advocated by the global science community to mitigate climate change - the reduction of greenhouse gases - will not prove sufficient to measurably slow the rapid pace of warming in cities"--
