Beauty and Body Dysmorphic Disorder
Routledge

Over the decades, research has demonstrated that in categories of life deemed to be important, beautiful people achieve more desirable outcomes, are judged more favorably, and receive preferential treatment. An understanding of the historical aspects, science, and implications of what the human mind finds aesthetically pleasing is quintessential for dermatologists, plastic surgeons, and others who practice aesthetic medicine as the importance of beauty in today's society is what brings patients into clinics. While an element of dissatisfaction with one's appearance is commonplace,

clinicians should remain vigilant for individuals who seek cosmetic procedures to quell excessive body image concerns that are out of proportion to objective physical findings. Body dysmorphic disorder (BDD) is a disorder of self-perception; it is the impairing preoccupation with a nonexistent or minimal flaw in appearance. According to recent statistics, BDD occurs in 0.7 – 2.4% of the general population; however, multiple studies have suggested an incidence of 6 – 16% in patients seeking aesthetic medical treatments. Moreover, a vast majority will at some point seek dermatologic treatment and cosmetic surgery. Such patients are unlikely to be satisfied with corrective procedures, and only 15% of dermatologists surveyed thought that they could successfully treat BDD. Therefore, *Beauty and Body Dysmorphic Disorder* aims to assist dermatologists, plastic surgeons, and other aesthetic providers in recognizing key characteristics as well as providing treatment strategies to help in caring for those with BDD. *Occupational Therapy in Mental Health* Springer Science & Business Media

The famous brich-bark manuscript in the Kharosthi script, which contains a recension of the Dharmapada in a Prakrit dialect, has long been familiar to students of early Buddhist literature under the name of 'Ms. Dutreuil de Rhins'. The manuscript, written in the first or second century A.D., is generally considered to be the oldest surviving manuscript of an Indian text. It was discovered near Khotan in Central Asia in 1892, and reached Europe in two parts, one of which went to Russia and the other to France. In 1897 S. Oldenburg published one leaf of the Russian portion; and in 1898 E. Senart edited the French material in the *Journal Asiatique*, together with facsimiles of the larger leaves, but not of the fragments. Now, almost seventy years after the discovery of the manuscript, it is possible for the first time to place before scholars an edition of the whole of the extant material, together with complete facsimiles.
