Flashcards |
Quizlet
The VSEPR theory
predicts that the

valence electrons on
the central atoms in
ammonia and water
will point toward
the corners of a
tetrahedron.
Because we can't
locate the
nonbonding
electrons with any
precision, this
prediction can't be
tested directly.
CHEM 30A 3.1
NonP E -
Cabrillo College
The basic
principle of
VSEPR theory is
that atoms bonded
to a central atom
will all push each
other as far away
from each other as
they can be. They
will be pushed
even harder by
lone pairs.
