Thomas Gets Bumped Baby Signs Incorporated

"What follows is an account of events experienced by the above man. As a film subject, he was one of the best I've ever seen, despite a complete lack of dramatic ability. The sources I've used for the creation of this report are, in the main, video footage—both consensual interviews with the subject and footage generated without his knowledge. At the time of this writing, he is employed at a facility called Shred Authority Neighborhood Storage. In terms of familial relationships, he has two sisters (no contact), a mother (no contact), and a father (yearly contact). His sexual interests are best described as disappointingly vanilla with longtime urges for mild deviancy. Hobbies include cycling, occasional woodworking, and researching arcane topics on the Internet and internalizing them. He lacks a formal education, yet is adept at finding information, albeit in an unsystematic way. I chose this subject not because of the events he experienced—though they are thrilling and profound—but because he stumbled across something that no one could turn away from. Though a select few of you may be familiar with my film work, I've recently retired to pursue other forms, hence the at times novelistic appearance of the following narrative"--

How and Why to Read and Create Children's Digital Books outlines effective ways of using digital books in early years and primary classrooms, and specifies the educational potential of using digital books and apps in physical spaces and virtual communities. With a particular focus on apps and personalised reading, Natalia Kucirkova combines theory and practice to argue that personalised reading is only truly personalised when it is created or co-created by reading communities. Divided into two parts, Part I suggests criteria to evaluate the educational quality of digital books and practical strategies for their use in the classroom. Specific attention is paid to the ways in which digital books can support individual children's strengths and difficulties, digital literacies, language and communication skills. Part II explores digital books created by children, their caregivers, teachers and librarians, and Kucirkova also offers insights into how smart toys, tangibles and augmented/virtual reality tools can enrich children's reading for pleasure. How and Why to Read and Create Children's Digital Books is of interest to an international readership ranging from trainee or established teachers to MA level students and researchers, as well as designers, librarians and publishers. All are inspired to approach children's reading on and with screens with an agentic perspective of creating and sharing. Praise for How and Why to Read and Create Children's Digital Books 'This is an exciting and innovative book — not least because it is freely available to read online but because its origins are in primary practice. The author is an accomplished storyteller, and whether you know, as yet, little about the value of digital literacy in the storymaking process, or you are an accomplished digital player, this book is full of evidence-informed ideas, explanations and inspiration.' Liz Chamberlain, Open University 'At a time when children's reading is increasingly on-screen, many teachers, parents and carers are seeking practical, straightforward guidance on how to support children's engagement with digital books. This volume, written by the leading expert on personalised e-books, is packed with app reviews, suggestions and insights from recent international research, all underpinned by careful analysis of digital book features and recognition of reading as a social and cultural practice. Providing accessible guidance on finding, choosing, sharing and creating digital books, it will be welcomed by those excited by the possibilities of enthusing children about reading in the digital age.' The History of America in My Lifetime Random House Books for Young Readers

This volume—a collection and synthesis of key research studies since the program's inception over three decades ago—serves as a marker of the significant role that Sesame Street plays in the education and socialization of young children. Editors Shalom M. Fisch and Rosemarie T. Truglio have included contributions from both academics and researchers directly associated with Sesame Street, creating a resource that describes the processes by which educational content and research are integrated into production, reviews major studies on the impact of Sesame Street on children, and examines the extension of Sesame Street into other cultures and media. In the course of this discussion, the volume also explores broader topics, including methodological issues in conducting media-based research with young children, the longitudinal impact of preschoolers' viewing of educational versus non-educational television, and crosscultural differences in the treatment of educational content. As the first substantive book on Sesame Street research in more than two decades, "G" is for Growing provides insight into the research process that has informed the development of the program and offers valuable guidelines for the integration of research into future educational endeavors. Intended for readers in media studies, children and the media, developmental studies, and education, this work is an exceptional chronicle of the growth and processes behind what is arguably the most influential program in children's educational television.
