At present the textile industry produces the majority of its 34 billion square yards of printed textile fabric by screen printing. However as we move into the digital age developments in digital printing of paper are being adapted more and more for the textile market. Inkjet textile printing is growing while growth in analog textile printing remains stagnant. As digital print technologies improve offering faster production and larger cost-effective print runs, digital printing will grow to become the technology that provides the majority of the world's printed textiles. This comprehensive introduction to the subject is broken into five sections. After two introductory chapters, it goes on to look in a number of detailed chapters at printer and print head technologies. The next section examines the printer software required for successful colour design and management. The digital printing colouration process is explored next, with chapters on substrate preparation, pigmented ink, aqueous inkjet ink, pre-treatment and printing on cationized cotton with reactive inks. The book is concluded with three chapters on the design and business aspect of digital printing. Digital printing of textiles contains fundamental technical explanations along with recent research, and is an invaluable guide for product developers, retailers, designers and academic researchers. This book is an intellectual history that uses Amílcar Cabral's theory of the "return to the source," to examine Sol Plaatje's Mhudi, B.W. Vilakazi's poetry, and A.C. Jordan's The Wrath of the Ancestors within the broader context of African cultural nationalisms in the early twentieth century African Atlantic World. It shows the development of the idea of African equality with Whites in the face of prevailing ideas of White supremacy during Union-era South Africa. These authors were part of the New African Movement, which was one of eight literary movements among Africans and peoples of African descent in the Americas between 1915 and 1945, including the Harlem Renaissance, Négritude, Claridade in Cape Verde, and similar movements in Cuba, Haiti, Brazil, and Belize. The text presents new models for interpreting Union-era African literature, and recasts understanding of the nature of interactions between Africans and Europeans, including Western Syphilization, Chiral Interdiscursivity, and the relationship between history and memory informed by a neurobiological analysis of memory.
