The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of

alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

*TWENTY-FIRST CENTURY'S FUEL SUFFICIENCY ROADMAP*

I grew up in the Highlands of Scotland and I became a musician while still at School. Then I made my first musical instrument at the age of just 13 years, an Appalachian Dulcimer. I joined the Royal Air Force at the age of 18. I served for 9 years. I worked at many of our secret establishments. Even during my military career, I continued to play in bands, as well as to write music. When time would allow, I made guitars for myself, although most of these ended up in my friends hands rather than mine. With the

bands that I played in, I have been fortunate enough to have recorded 32 albums. Most of these albums were with my Irish Rebel Band, aptly named '1916'. I later formed my own company making bespoke guitars (Gordon Guitars UK) The pressure of running so many ventures simultaneously eventually took its toll and a series of heart attacks followed. So I looked for a new and more sedate way to direct my creative juices and writing thrillers fitted that bill perfectly. This will be my fifth thriller and like the other books, this novel is a mixture of both fact and fiction. I prefer to call this genre 'Faction'. So any similarity to people in real life, is purely coincidental. Names and places may have been changed to protect the innocent.
