Corporations, government offices, and academic institutions have long used video to educate and inform. The only thing that's changed is the people who are producing them: With low-priced equipment and easy-to-use software flooding the market, now you're the person behind the camera, not some high-priced video specialist! This is the guide for you, then-and all of the other nonprofessionals who've been called upon to produce top-quality videos. Long on essentials-like where to place the camera, how to connect microphones, and which font to use in titles-and short on theory, this guide focuses instead on the simple steps and best practices needed to produce great videos. Veteran author Jan Ozer gives you the lowdown on shooting, audio, and lighting before describing the workflow and procedures involved in converting raw DV footage to streaming video and DVDs, and distributing the final product. For software-specific guidance, you can purchase downloadable PDF workbooks that use the book's projects to walk you through the production process.

There are two basic chapters providing a basic tutorial of the field and a context for the reference material to follow, a massive section (the bulk of the book) given over to pure reference data - organized carefully by topic and usage, a complete audio technology dictionary, and finally an exhaustive listing and referencing of all major standards and protocols.
