Electric Field Analysis is both a student-friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element, charge simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains

how high-voltage field optimization studies are carried out to meet the desired engineering needs Electric Field Analysis is accompanied by an easy-to-use yet comprehensive software for electric field computation. The software, along with a wealth of supporting content, is available for download with qualifying course adoption.

to a sleepy beachside town for a holiday with his biker foster dad, Dev. Only when a monster ute runs them off the road does Joel begin to suspect that all is not as it seems. Who is driving the killer ute, and why are they after Joel? As danger mounts, Joel and Dev are forced further into hiding. But a killer ute isn't all Joel has to fear. Will Dev still want to be his dad even though he's a magnet for trouble? This exhilarating action-adventure is the third and final installment in the trilogy, following "The Keeper" and "Sailmaker."

**Modern Prestressed Concrete Design**

Wakefield Press  
A loving book devoted to the original Holden model, the 48-215 sedan and the 50-2106 utility, commonly known as the FX model. It is gorgeously illustrated with over 320 photographs in color and black & white, and includes a wealth of new stories, history, and littleknown facts about Australia's first home-made car. Serial Entrepreneur Pitman Publishing  
An integrated collection of a dozen of Peter Earl's lively and thought-provoking

essays, carefully edited and updated. Theoretical topics include the prediction of corporate behaviour, the economic foundations of marketing and shopping mall design, pricing strategy and its relationship with the existence of second-hand markets, and the microfoundations of macroeconomics. Case studies include co-operation in the car industry, managerialist reforms in New Zealand and the university sector, structural change

in the advertising industry and the place of GB Richardson and GLS Shackle in the literature of economics.

From the founding editor of "MORE" magazine comes an inspiring and useful look at how yesterday's Baby Boomers are becoming today's adventurous midlife pioneers.

Heart of the Lion  
Abrams  
"This book is about

---

the people I met as I crisscrossed Australia by train and plane and L-plated car: the undefeated dreamers and wild-hearted romantics, the obsessed hobbyists and beautiful failures. It is about heroes and legends, illusions, delusions and hope, and one or two men with shit for brains who ought to be locked up." As anyone who's ever read Mark Dapin's column and features in Good Weekend knows, he's an immensely funny, acute and vivid observer of Australian life. In Strange Country, he takes us on a journey through a very different Australia - a country that's eccentric, puzzling, big-hearted, small-minded, nostalgic and sometimes just plain mad. From the last

travelling boxing tent to feral urban sewer rats to Vietnam Veteran bikies and the annual Parkes Elvis Festival, his writing illuminates the stranger side of Australian life in a travel book like no other.

### **The FJ Holden**

Carolrhoda Lab& 8482  
The New York Times-bestselling author of How to Make a Spaceship presents the remarkable, uplifting story of a life-saving medical breakthrough. In 1951 in Sydney, Australia, a fourteen-year-old boy named James Harrison was near death when he received a transfusion of blood that saved his life. A few years later, and half a world away, a shy young doctor at Columbia University realized he was more

---

comfortable in the lab than in the examination room. Neither could have imagined how their paths would cross, or how they would change the world. In *Good Blood*, Julian Guthrie tells the gripping tale of the race to cure Rh disease, a horrible blood disease that caused a mother's immune system to attack her own unborn child. The story is anchored by two very different men on two continents: Dr. John Gorman in New York, who would land on a brilliant yet contrarian idea, and an unassuming Australian whose almost magical blood—and his unyielding devotion to donating it—would save millions of lives. *Good Blood* takes us from research

laboratories to hospitals, and even into Sing Sing prison, where experimental blood trials were held. It is a tale of discovery and invention, the progress and pitfalls of medicine, and the everyday heroics that fundamentally changed the health of women and babies.
